

Dec. 1, 1939.

Mr. H.C. Dees,
Baltimore, Md.

Dear Claire,

Mr. Harry Kettell, Safety Engineer for the SONY
Baltimore Refinery advised me today that they have had considerable
success with a new type synthetic rubber glove. This glove withstands
gasoline and oil much better than rubber and is far more pliable
than real rubber.

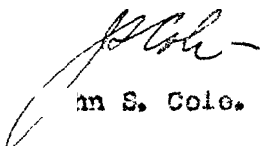

These gloves are manufactured by the following company,

The Goodall Rubber Corp.
Philadelphia, Pa.

They are known as Style #26 synthetic rubber glove and
size #10 sells for \$10.60 a dozen.

I am attaching two samples and I believe it would be
advisable to send one each to both Dr. Kehoe and Mr. Lewis for their
comment.

Yours very truly,

W. S. Cole.
