TO

--R.M. Kountz -- RKOUN

This will confirm my discussion with Cumming Paton on the revised forecast issued by Paton and Waychoff 12-6-68. Forecasted requirements for 5460 starting in 1970 assume FDA approval for use in hot melt adhesives.

The matter of maximum allowable chlorinated biphenyl content required under an FDA approval is still a question mark. In the absence of a firm guideline I propose we proceed on the basis of 0.1% maximum. This further supports the alternate of a new separate line for 5460 with steam tracing. Suitable quality Santowax must be assured also.
