Tapered Drum

Tapered Drum

Item	Description	Item	Description
1	Lining (Tapered Wear)	3	Brake Drum
2	Shoe	4	Brake Drum (Tapered Wear)

A tapered drum is the opposite of a bell-mouth drum.

- This condition can also be verified by measuring different points of the drum.
- The closed end of the drum is worn or distorted more than the open end.
- It also is indicated by angled wear of the brake shoes, but with a tapered brake drum the shoes will angle downward from the outer edge inward.
