Q I will hand it to you. You talked about his shortness of breath.

Would you read the first paragraph to the jury what the doctor said back in April of '81.

A This is a note by Dr. Heyman. He thinks that the abdominal girth may have increased somewhat, and he thinks the umbilical nodule is larger. He notices shortness of breath only with vigorous exertion.

Do you want me to read the rest of this highlighted?

Q If you would, please.

A He has invaded transient back discomfort when sitting in one position for any prolonged period of time.

He has no significant abdominal discomfort, nausea, vomiting, melena, or hematochezia.

Q That is fine, Doctor. What does that mean?

What do those two terms mean you just read to the jury?

A Which terms?
