SUBJECT: GRIPTEX MINERAL WOOL BLOCK INSULATION

Griptex Mineral Wool Block Insulation has a temperature limit of 1900°. Since our discontinued product, #19 Insulating Block, also had a temperature limit of 1900°, there may be some confusion existing. Although both products are rated at 1900°, our #19 Block was considerably stronger than Griptex.

In many instances, when used as a backup insulation, and when suitably supported, Griptex could be substituted for the stronger #19 Block. In other applications where strength is a factor, it could not be substituted.

To prevent any further misapplications, we suggest that you check with the Engineering Department, or us, to determine if a substitution can be made.
