

1 Q Okay. Am I correct, then, that what you
2 were attempting to analyze or collect was the total
3 wear debris from these activities?

4 A Yes. What we wanted to do what is
5 technically referred to as establish a mass balance.

6 We have measured the brake linings before
7 and after each test sequence, so we knew how much
8 weight loss there was from the brake linings.

9 We analyzed the composition of the brake
10 lining, so we knew roughly how much of the brake
11 linings would go into vapors, water, and gaseous
12 material.

13 So we hoped to be able to capture a good
14 percentage of the material that would be worn, and we
15 did, in fact, do that.

16 Q After you -- how long did it take you to
17 collect the samples?

18 A To actually collect the sample?

19 Q Right. To do all of the braking which led
20 to your sample collection?

21 A The testing was done within a day or day and
