Rochester 21, New York

Dear Mr. Angelini:

Your letter of June nineteenth addressed to our Bakelite Company has been referred to me for answering. Regarding the "Bakelite" acetate resins AYAA and AYAT, these resins are polyvinyl acetate 100% and are extremely inert physiologically.

Based upon a published report by Dr. A. J. Lehman, Chief, Division of Pharmacology, Food and Drug Administration in his article "Food Packaging" which appeared in the QUARTERLY BULLETIN OF THE ASSOCIATION OF FOOD AND DRUG OFFICIALS OF THE UNITED STATES, Vol. XX, No. 4, October, 1956, polyvinyl acetate resins are considered acceptable for use in food packaging materials such as films, coatings, etc. This refers to the resins themselves and does not include additives, etc. which may be incorporated with such a resin in a formulation.

Very truly yours,

MEDICAL DIRECTOR

Thomas W. Hale, M. D.

Attn: Mr. J. T. Ingram, Jr.

Gentlemen:

We are anxious to begin development on a heat sealable coating for cardboard and in your letter to us of May 9, 1958, you stated that you were going to send us samples of your acetate resins AYAA and AYAT.

We have not as yet received these samples and would greatly appreciate your advising us as to when we may expect them. They are enclosing our experimental purchase order for same.

Is our understanding correct that these resins are completely non-toxic?

Very truly yours,
