SUBJECT: RESPIRATORY PROTECTION PROGRAM

It is necessary to periodically review and update the above subject program. Please let me have a copy of your most recent written program. If it is more than a year old, it should be updated and rewritten.

You may want to refer to ANSI Standard Z88.2-1969, "Practices for Respiratory Protection," which was supplied the plants in 1975. Some locations are using a considerable number of 3M's Throw-aways, which eliminate a cleaning problem. Regardless of the type used, instructions should be given all employees, particularly regarding fitting.

Attached is a helpful article on implementing and maintaining a Respiratory Protection Program by Mr. Rapp of Travelers Insurance Companies.
