Mr. Edward L. Aasen
Georgia-Pacific Corporation
900 S.W. 5th. Avenue
Portland, Oregon 97204

Dear Ed:

Cleveland has advised today that the new "Caution Clause" decorated plate will be available at the plant for manufacture the week of July 22nd.

With this in mind, please advise soon now what will be needed for Akron, Marietta, Chicago and Milford plants for the next two or three months' schedule. Both the plate and the decorating supply are tight now, Ed, and I need your help in setting up some kind of production plans for Cleveland to follow if they are to keep all plants going properly.

Also, since Acme plant is still going to use the regular design without the "Caution Clause", I'll have to have some estimate from you of their needs of that plate for the next several months. Right at the moment, Cleveland has only enough plate for 3,300 pails for Acme so they are awaiting my instructions.

Please get to this and get the necessary information to me as quickly as possible, Ed, so that we don't fall down on our service to your plants. Awaiting your word,

Sincerely,

Lee Mason
President.

subject Monitoring for Asbestos Dust

date July 2, 1974

Because of the prospects of eliminating asbestos from our joint systems products, the program for division-wide training of asbestos dust monitoring is being postponed. After the first of next year, we will review our dust problems to determine if such a program will be necessary.

In the meantime, those locations requiring asbestos dust tests should schedule them as we have in the past for compliance with federal regulations on dust monitoring.
