Dr. E. E. Evans
The Grasselli Chemical Co.,
East Chicago, Indiana

Dear Dr. Evans:

The twenty-four hour urine sample of your patient arrived a few days ago and is now in the process of analysis, so we will be able to report to you in about a week.

I note from your letter that an abnormal amount of lead had been reported as being present in this man's urine. May I ask whether or not arsenic determinations were also done?

It would be advisable in estimating this man's exposure and as an aid in interpreting urinary lead finding, to have also a specimen of stool for analysis.

If we can be of any further service to you, kindly let us know.

Very truly yours,

WM:IS
