

SUBJECT COPY

INTER-OFFICE MEMO **TENNECO CHEMICALS, INC.**

TO Mr. G. S. Flint AT Saddle Brook DATE December 24, 1975  
 FROM Mr. W. P. Anderson AT Saddle Brook COPY TO Dr. S. R. Sheeran  
 Mr. L. Feldcamp  
 SUBJECT E.P.A. VINYL CHLORIDE REGULATION

I have received a copy of the final version of the document: E.P.A.-600/6-75-004; Scientific and Technical Assessment Report on Vinyl Chloride and Polyvinyl Chloride. This was listed in the preamble to the proposed VCM Regulation as one of the supporting documents for that regulation.

The report deals primarily with sampling and measuring techniques and health effects. Most of the contents seem to be abstracts of other publications with a limited amount of editorial comments by the authors of the report. It contains extensive lists of references at the end of each section.

We have seen an early draft of this report and also have seen much of the material it contains in other reports. I find little new information though there seems to be more positive, less speculative statements about health hazards associated with VCM in this than in earlier reports.

I am enclosing copies of the title page, abstracts, and summary and conclusion sections. The complete document runs to 228 pages of text and is available in my office. I am sending a copy of this memo and enclosures to Mr. Feldcamp for his information.
