Re: Slurry preparation for pipe plant

Dear Mr. Hawkins:

Attached is part of a flow sheet prepared by Bell for a slurry preparation plant. To enable Bell to submit a proper proposal they need some additional information from you, namely:

Output of finished pipe in t/h
Capacity of wet mixer in t/h
Shall Bell supply driver and controls for mixer?
Do they have to provide pumps and valves, etc for transport of wet slurry to pipe machine, or shall wet end of mixer terminate with a flange?

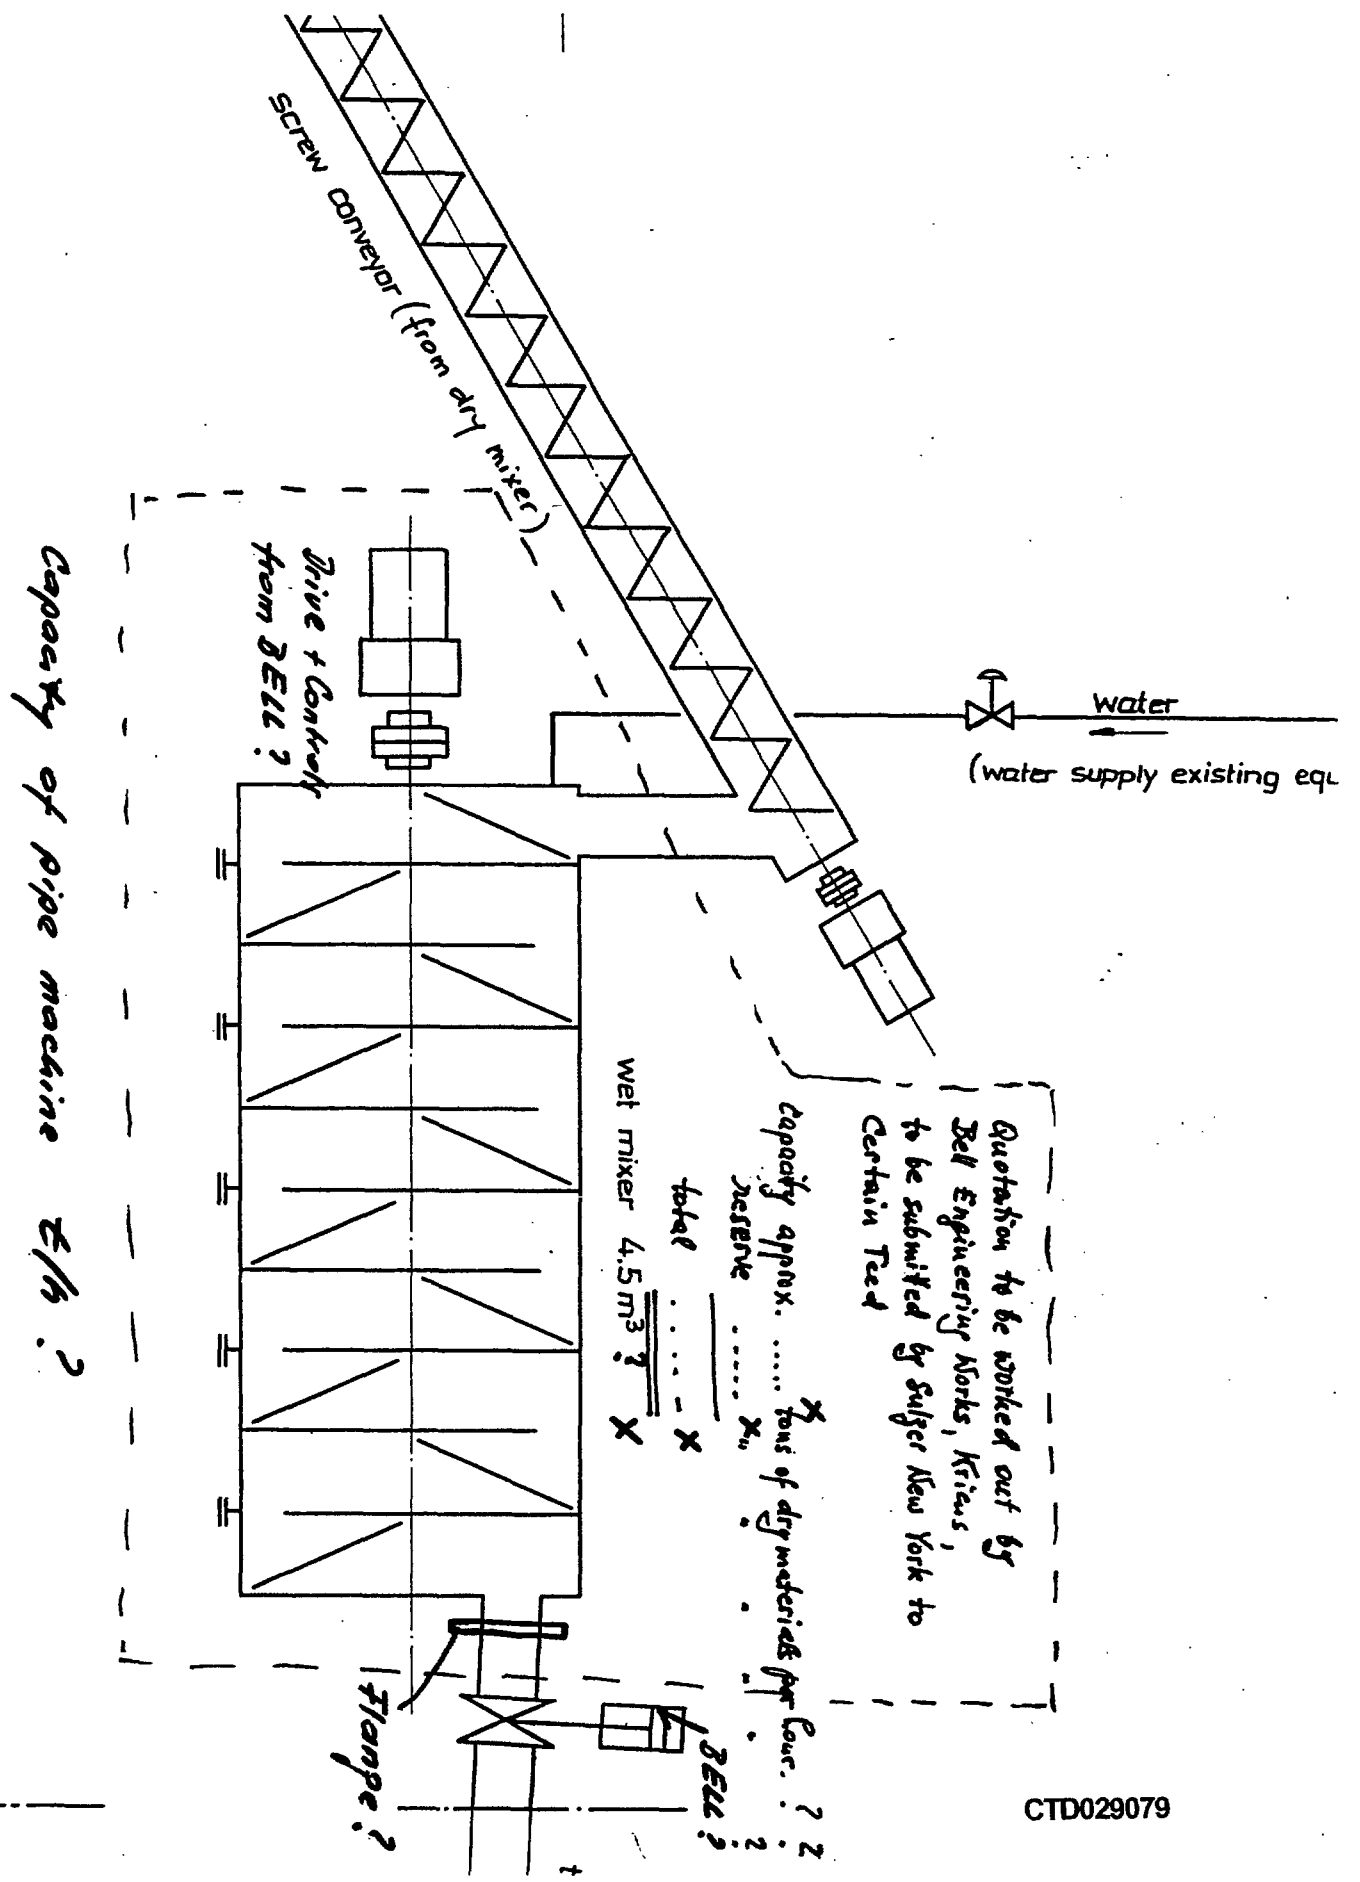

After receipt of your answers we shall submit our proposal with a short period of time.

Assuring you of our best cooperation at all times, we remain,

Very truly yours,

SULZER BROS. INC.
