Lithopene - Bird

In light of the latest findings of our Chicago Production Department on the performance of the last batch of h6LM, Bird Special, we have been asked to obtain a raw material classification number on same. We have therefore put through a request for assignment on this particular lithopene under the raw material designation 67 C 3. Specification on this material will read precisely the same as for the current raw material card h6LM. It will, however, cover only the Special Bird classified material processed in the same manner as the last shipment to Chicago which produced the satisfactory results.

It is our understanding that Permelith h6LM, Bird Special, is to be used only in Enamel Formula F7h W 2 and similar enamels, and is not intended to replace the regular h6LM where this additional fineness is not necessary.
