Subject: request to interview fuel economy expert

I'm a freelance journalist and have written for many national publications including The Wall Street Journal, The New York Times and Scientific American. I'm writing an article for a magazine called Ensia:

<https://ensia.com/>

that discusses the implications of two hypothetical scenarios: there is no federal fuel economy standard and states can't impose one; and the federal fuel economy standard is the one originally envisioned by the Obama administration: 54.5 mpg. What would be the impact on fuel consumption, energy innovation, demand for vehicles, safety, jobs, emissions of greenhouse gases and other pollutants, international trade and competitiveness; and more under each scenario?

Of course I'd like to interview someone handling fuel economy for EPA. Any time within the next couple of weeks would be fine.

This is intended to be an informative thought exercise -- nothing more.

Can you connect me with the appropriate person on this issue?

Thanks so much.
