July 26, 1933.

To the Stockholders of Monsanto Chemical Company:

The net earnings of our Company for the second quarter of 1933 were the best quarterly earnings in its history. Sales and profits amply reflected the improvement in general business conditions, which made itself evident toward the latter part of April. The earnings for the quarter were made on a decidedly lower price basis, thereby showing the results of the increased efficiency that has been built into our plants during the past few years.

Our net profit for the second quarter after all charges was \$542,027, which was equivalent to \$1.26 per share on the 427,608 shares outstanding, or more than double the 60 cents per share earned during the second quarter of 1932. Earnings for the half year amounted to \$838,947 or \$1.96 a share, compared to \$1.24½ for the first six months of last year.

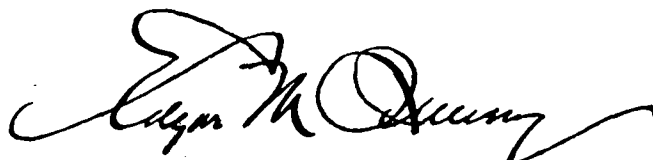

The attached balance sheet reflects the continued healthy condition of the Company. In spite of a net increase of \$304,066 in plant facilities, and an increase of \$528,362 in our investment account and payment of regular dividends, our cash and net current asset positions approximate those of the first of the year. The increase in the investment account is represented mainly by our acquisition of the controlling interest in the Swann Corporation.

The profits and current assets of our British subsidiary are included in both the attached consolidated income account and balance sheet at the rate of \$3.40 to the £. Current quotations are over 30% higher. The income account does not contain any undistributed profits of affiliated companies in which we have investments.

The National Industrial Recovery Act presents many problems as well as benefits to industry. Your management, however, has anticipated the main purposes of the act. More than a year ago we voluntarily initiated the forty-hour week in our plants, and since last fall no employe of our American divisions has had duties which required him to work more than forty hours a week.

Our wage rates in general have not been reduced from the 1929 level. Therefore, I am confident that any minimum wage which may be established for the chemical industry will be below that which we are now paying. While I expect that no advance in wage rates will be required of our Company, I believe that greatest efficiency is attained by adequately paid workers, and that the interests of stockholders will be best promoted by maintaining our wage rates above future minimum requirements.

Our July shipments and sales are continuing at a high rate, although July and August normally are accompanied by a slackening of orders. Plant operation and employment consequently are in pleasant contrast to that of a year ago.

President.
