SUBJECT: SMITH & KANZLER

re: Material Development Programs

Pursuant to our telephone discussion of today, we will suspend further activity in the evaluation and development of a millboard substitute at Smith & Kanzler. This would seem an opportune moment to request a re-assessment of our general development program with Smith & Kanzler materials.

We are currently involved in evaluation of 6506, Victolex 258, as well as laminated B. T. Board and millboard substitute. We are also seeking ways and means of upgrading Asbestoprene. Since much of this effort dates back at least two years, if not more, we feel a re-assessment of our needs with respect to these projects is very much in order. We would appreciate your comments on this matter.
