Subject: RE: FPP4EU Sector Group answer to the 2nd Stakeholder Consultation on a Restriction for PFAS: uses of PFAS missing in the 16 Reports
Received: Fri 3/11/2022 3:18:39 PM

Dear 5.1.2e

We were also disappointed when we saw the title as we never made the statement in the extended interview provided to Chemical Watch. We will take this up with them for future publications.

It is true, however, that, not knowing what a PFAS restriction under REACH will look like, creates a lot of uncertainty for our members and downstream users.

We meet on a regular basis via our Collaboration Platform, which consists of more than 60 downstream users (representing a wide range of sectors) and 13 Members (producers, users and importers of PFAS). The Collaboration Platform is open to any interested party on the PFAS restriction and also gives voice to bodies that are not able to participate in the different consultations launched by the authorities. We would like to build on these meetings and organise a workshop open to EU policymakers where we will welcome very much your participation as a speaker or as an attendee. We hope to involve all relevant stakeholders and work together to achieve the most optimal, implementable and enforceable regulatory measures on PFAS. In this spirit, we remain open to a dialogue and we hope you can consider the invitation to our future workshop.

Best regards,

5.1.2e

External email - Think before you click on links and attachments.

Dear 5.1.2e

On March 3rd, 2022 Chemical Watch published the article "FPP4EU: Authorities underestimate range of sectors EU PFAS restriction would impact" in which you indicate that the authorities of the five countries working on the PFAS restriction have missed 104 PFAS uses. We are surprised by this article because there have been two public consultations that provided the possibility to the industry to send information on all relevant uses of PFAS. During the second consultation, you've send an email dd. October 15th 2021, including an excel file with a non-exhaustive compilation of missed uses and we assume with this, we should have a fairly complete picture. Currently, we are processing all information received during the second consultation round, including this information. In the restriction proposal we will present all relevant information.

As you are aware, after the submission of our proposal, ECHA will organize another consultation round. If needed, companies, sector organizations and other stakeholders can use this consultation round to comment on the proposal and provide additional relevant input.

Therefore, we do not see the need to organize one or more technical meetings to discuss the chemical PFAS universe.

However, we welcome the opportunity to contact you, in case we have specific questions.

Kind regards,

5.1.2e

Subject: FPP4EU Sector Group answer to the 2nd Stakeholder Consultation on a Restriction for PFAS: uses of PFAS missing in the 16 Reports

Dear 5.1.2e

With the attached Excel sheet, we would like to contribute to the Consultation on a Restriction for PFAS, highlighting some PFAS missed uses that have been identified as having been for the compilation of the 16 Summary Reports.

Cefic's FluoroProducts and PFAS for Europe (FPP4EU) Sector Group represents manufacturers, importers, users of PFAS substances and interested stakeholders (many downstream users).

We would like to emphasise that the attached document proposes a non-exhaustive list of examples of missed uses of PFAS. The answers were provided by different parties, including individual companies, national and European associations and sector groups. We have merged, anonymised and randomised the received answers, but we did not modify the received feedback. Therefore, some examples of missed uses of PFAS could be duplicated.

We remain at your disposal for any question you might have in relation to the attached file.

Best regards

5.1.2e
