

October 24, 1961

M. L. Hagan  
B-106

Periodic examinations on men exposed to asbestos and TDI  
included:

and because of asthma and decreased  
lung capacity should not be exposed to dust, irritating  
gases, asbestos and TDI.

Mr. because of repeated episodes of bronchitis and  
abnormal pulmonary function test should also have the same  
restrictions.

Mr. and Mr. should also stop smoking.

Letters will be written to the individual men giving them  
the results of their physical examinations after you have  
received this letter.
