Dr. George Calingaert
Ethyl Gasoline Corporation
723 East Milwaukee Avenue
Detroit, Michigan

Dear Cal:

I have seen one of the simpler types of mercury detectors as supplied by the General Electric Company, and I am very much interested in knowing that they have developed or are developing a more precise equipment for this purpose. Not only am I interested in this device in connection with mercury exposure, but I am also definitely interested in the application of some such principle for the detection of tetraethyl lead. You are well aware, no doubt, that the instrument would be of very little use to us unless it would give fairly accurate quantitative figures. If this could be done, I am sure that we could find good use for such equipment. I should be very glad if you would keep in touch with this matter and further any developments so far as possible.

Sincerely yours,

RAK:is
