consisting of several shallow drawers which hold freshly ironed linens perfectly. And there is a steel base hamper for soiled linens, too. All of these special steel cabinets exactly match other wall and base units in the kitchen.

Snack bars too, have become amazingly popular in new kitchen stylings, just as built-in ovens, surface units, and wall refrigerators are continuing to rise. All of these latest innovations are easily incorporated in steel kitchens because of the wide variety of standard and special purpose steel cabinets which are being manufactured today. For this reason it is fairly easy to devise the distinctive, individualized plan desired in the latest kitchens, using versatile steel kitchen cabinets.

A panel of hardboard is dog-proof, won't scratch.

Door Guard

One way to protect a screen door from a puppy's scratching is to attach hardboard of the tempered pressed wood type around the lower framing and extending over part of the screen.

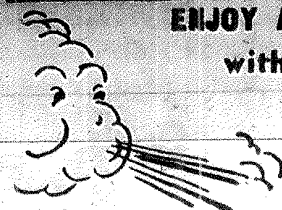

Fido can scratch on this smooth hardboard all day without injuring it. It is an extremely dense and tough material.

Bevel the edges slightly with a file or sandblock and use 1 1/4 inch brads to fasten the material. A coating of clear penetrating sealer will retain the attractive dark brown color and prevent Fido's scratches from showing.

Similar protective panels may be installed as kickstrips on frequently-used doors and as push panels on swinging doors.
