ar.1260 (AK-3)

# PCB FINDINGS

Problems related to Kimbrough findings:

ar.1260 (AK-3)

~~PCB~~ is an experimental carcinogen

(?) ~~X~~ in one strain of rats

(NCI still talks about need to establish in two species (dogs, mice, etc)

Interpretation of findings

Follow Delaney concept?

Get interpretation of experimental cancer specialist

Get interpretation of NCI

Is PCB a human carcinogen?

Krummrich

GE

Widespread dissemination

Notification of regulatory agencies

NIOSH

OSHA

FDA - (residues in paper)

EPA

after outside specialist

Notification of customers

GE

Status of Aroclor 1016

RECOMMEND

1. Establish that tumors are or are not seen in other species

   a. rats - withdrawal from diet at 18 months
   b. dogs - 8 years?
   c. hamsters -

2. Environmental measurements

3. Present data to Shubik

4. ? Then present data to NCI - with dispatch

5. Start epidemiologic studies

   Cancer death - liver and all others
   Krummrich
   ? GE
   Use Enterline of Pittsburgh

## PCB TOXICOLOGICAL STUDIES

## July 8, 1975

I. Review Dr. Shubik's Comments - G. Roush

II. Review Dr. Calandra's Comments - G. Roush

III. Toxicity Statement

A. Contents

1. Review of Monsanto IBT studies
2. Marketing policy
3. Epidemiological study results
4. Evidence of decrease in environment
5. Etc.

B. Discuss with Governmental Agencies

1. NIOSH
2. NCI
3. FDA
4. EPA

C. Discuss with Customers

1. Key?
2. All?

IV. Need for further Animal Studies NO - Roush says

V. Future Monsanto Posture

A. FDA hearings on PCB in paper packaging - will probably be held in August.

B. Inquiries from News Media

C. Hearings in Wisconsin, Michigan, Minnesota - probably August.
