Dr. Steve Lamm
Tabershaw Associates
10215 Fernwood Road
Suite 302
Bethesda, Maryland 20034

Dear Dr. Lamm:

As we discussed during our phone call today, we have looked at the carcinogenic potential of the PCB's. The attached report from Dr. Pour, of the Eppler Institute, should be of interest. It does contain more information than you need but you can pick and choose and then discard. In addition, there was a PCB study by the Cancer Institute which also found one of the Aroclors to be non-carcinogenic.

If the PCB's are carcinogenic, they must be considered to have very low potency.

If you have questions regarding this report, please call me.

Sincerely,

George Roush, Jr., M. D.
Director, Dept. of Medicine
and Environmental Health
