DATE : August 6, 1971

HR

SUBJECT : Lead Elimination - House Paints

RELIN TO LISTEN OF

DICTATED BY

Further complications involving label inventories and formula revisions have made it necessary to reschedule the Lead Elimination Program as follows:

Tint Colors (A2Y50, A2A47, A2A20, A2G93, etc.) -- The 9-1-71 conversion date will be met. New formulas are to be issued to factories August 23, neither 12/88 nor 30P Zinc Oxide will be required in the new formulas. Therefore, total Leaded Zinc requirements will be reduced accordingly.

House Paint Whites (B46W4, B46W14, A2W4, A2W8, etc.) -- The conversion to Oxide 30P is now scheduled for November 1, 1971. Leaded Zinc, code 68-22-00 will be required until then.

Undercoaters (A2W2, A6W32, A6W39, etc.) -- Conversion is scheduled on October 15, 1971. New formulas will have no requirement at all for Zinc Oxide -- Leaded or Lead Free. Basic White Lead, code 68-06-22 will be required until then.

Coffeyville is unable to fill new orders through August 30, 1971, however, they currently have a limited inventory. Since August 30, is the next scheduled production, the factories should not expect to receive new orders placed until approximately September 13, 1971 when considering the required time in transit.

Based on the above conversion dates and next available production, please forward requisitions immediately to the writer's attention for Leaded Zinc 12/88 you will require between now and mid September when your orders can be met from Coffeyville. The current inventory at Coffeyville will be allocated on the basis of emergency.

Please place orders immediately on Coffeyville for your September 13 and later requirements.
