Union boiler No. 6 designed to operate at 83.62% efficiency for Upjohn

Increasing in number with the growth of the Upjohn Company, leading manufacturer of pharmaceuticals, six Union Steam Generators now provide process and space heat at the Kalamazoo, Michigan plant.

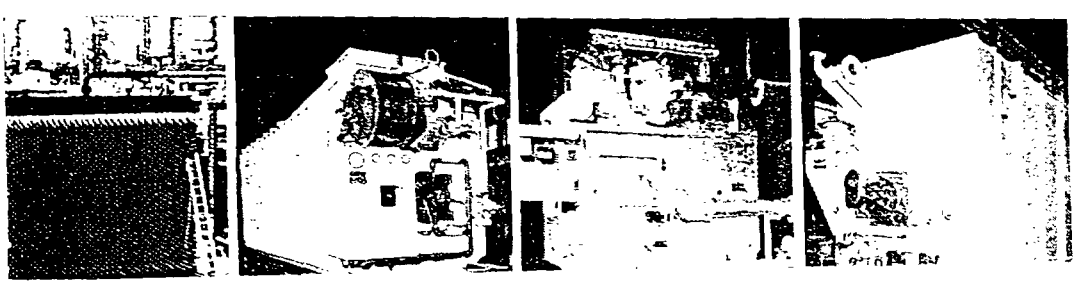

Most recently installed is No. 6, a 90,000 lb./hr. Type VO Steam Generator fired with a Riley Traveling Grate Spreader Stoker. Equipped with a Union Bare Tube Economizer, it is designed to operate at 83.62% efficiency. The Upjohn Company reports, "Union boilers have performed satisfactorily for us for the past ten years."

Around the world, Union Steam Generators are delivering dependable, low cost steam for industrial, institutional and public power plants.

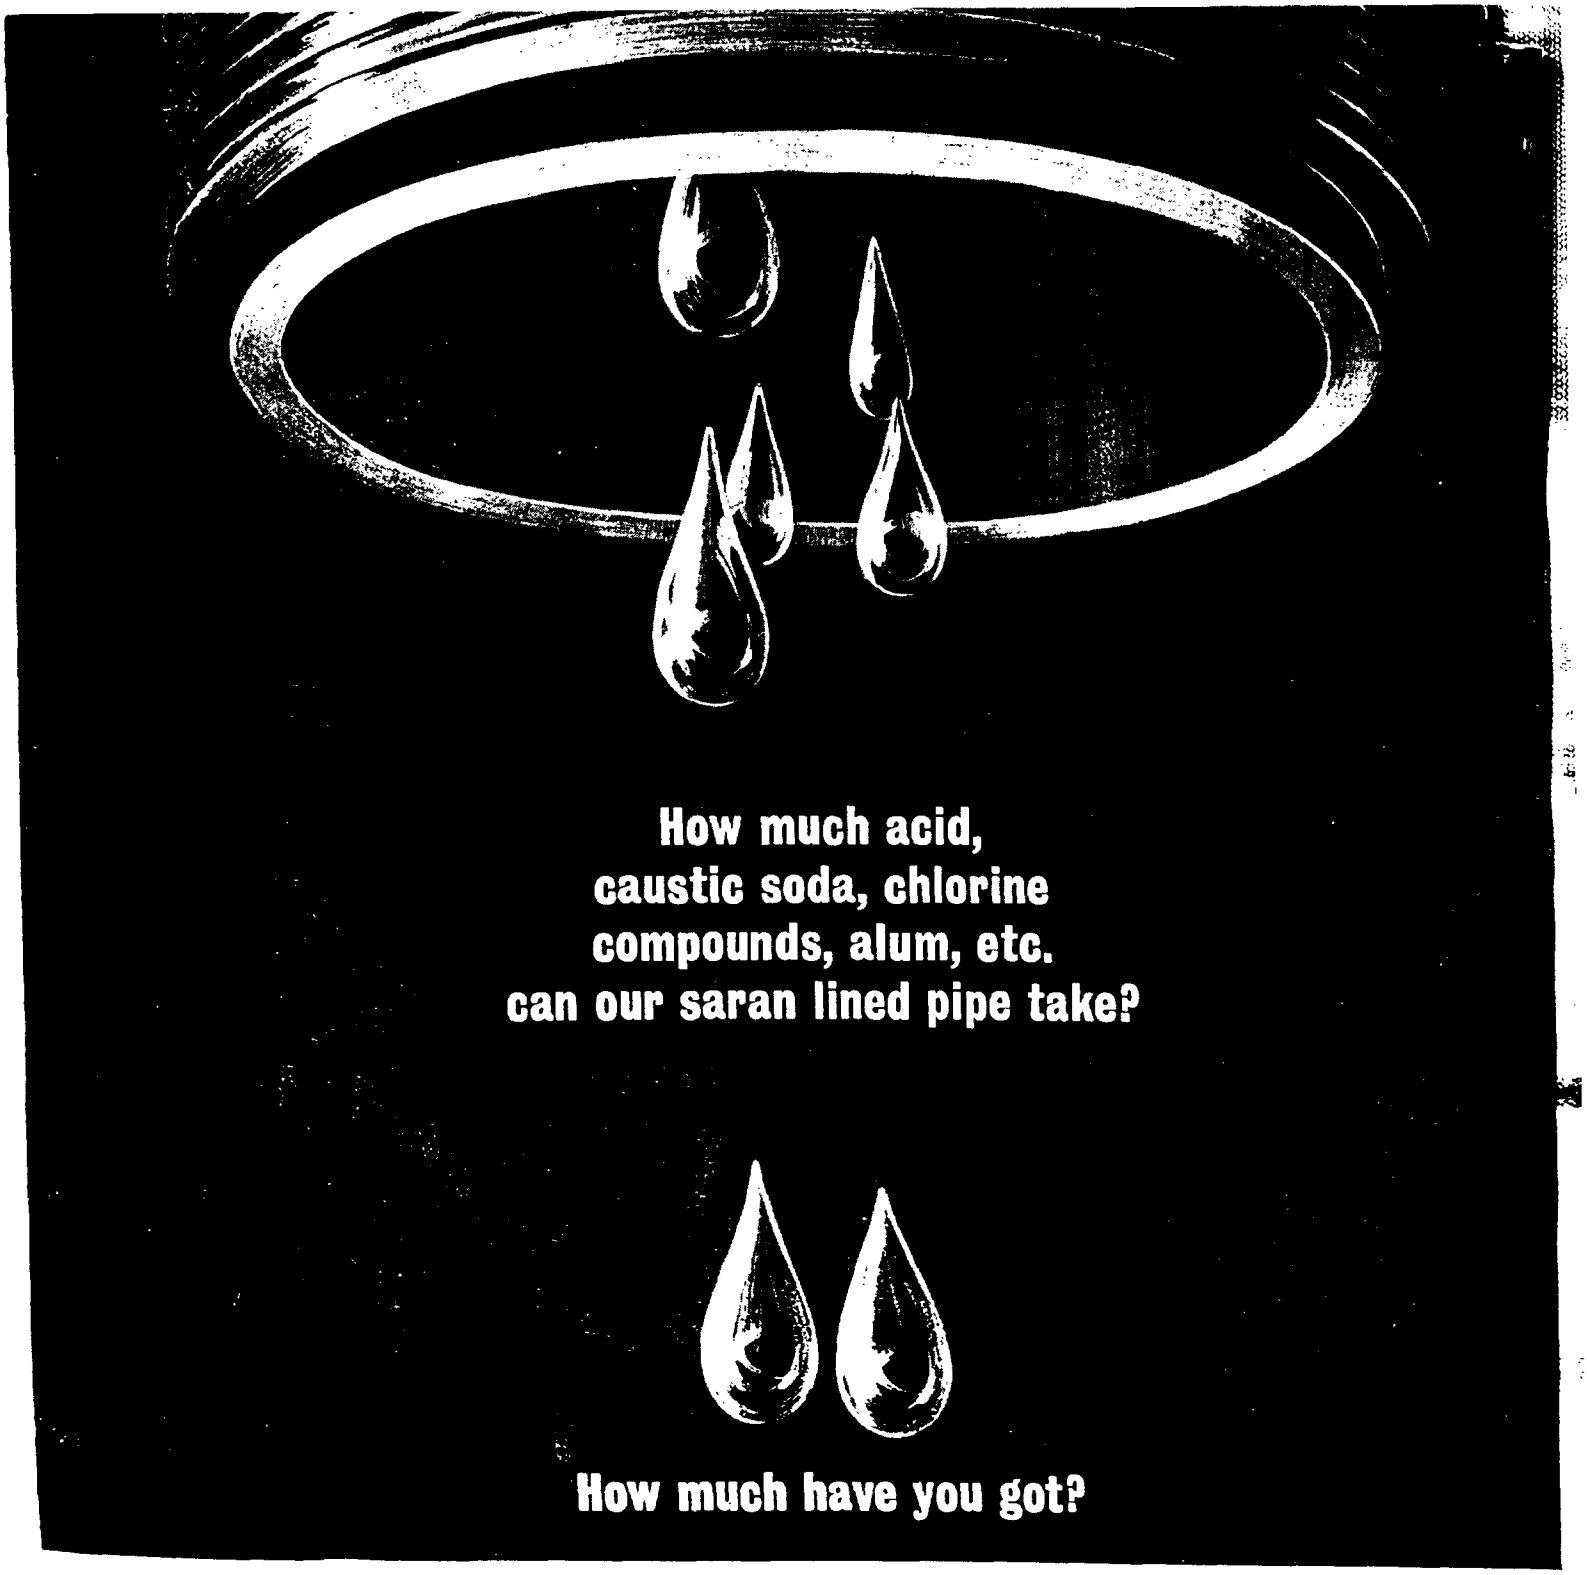

For more information, contact your local Riley Stoker Corporation or Union Iron Works office.
