Bank of PRECIPITRON cells which capture microscopic dirt from air supply before it enters motor room (below).

Clean Air contributes to continuous production

The application of "Precipitron" air cleaning in numerous commercial and industrial establishments, is a cheap form of insurance where-ever air-borne dirt—often invisible—can be a menace to equipment, furnishings or continuous production.

Here, a large Canadian Steel Company safeguards expensive equipment and the continuous production of its product by eliminating all hazard of air-borne dirt. With production of strip at 3300 feet per minute, even a temporary failure due to the abrasive action of air-borne dirt, would entail tremendous loss.

*Among INDUSTRIES now using PRECIPITRON:
Textiles, Pulp and Paper, Steel, Foods, Chemicals,
Pharmaceutical, Cosmetics, Plastics, Welding.*

For application data and other information, write:
