Rob,

All articles are from the SHS. The 2 that are literature reviews were done in support of the exposure assessment to try to gain a historical perspective.

Regarding upcoming papers, you will know when I know. We have learned that disease progression and a molecular epi should be coming out in 07/08. the new time line is to complete data collection in 07, analyze in 08 and publish in 09.

I'll give you a call - hopefully this week to discuss.

Patsy

Patsy

Thanks - do all these relate to the SHS?

It would be good to get a list of all forthcoming research publications as well.

Rob
