Federal Proposed Sites (by Group)	46
EPA Superfund Offices	94

The National Priorities List (NPL) identifies the targets for long-term "remedial action" under the "Superfund" law, the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA). CERCLA set up a Trust Fund that totaled \$1.6 billion over the first 5 years of the Act to pay costs not assumed by responsible parties for corrective actions at abandoned or uncontrolled hazardous waste sites that threaten human health or the environment.

The U. S. Environmental Protection Agency (EPA) has the primary responsibility for managing cleanup and enforcement activities under Superfund. As of June 1986, EPA had inventoried over 24,000 uncontrolled hazardous waste sites. Some require emergency action because they represent an immediate threat. EPA cleans up such sites promptly through its "removal" program. As of May 20, 1986, EPA had started 726 removal actions, including 177 at NPL sites where initial cleanup measures were required. To be eligible for a long-term remedial action under Superfund, however, a site must be on the NPL.

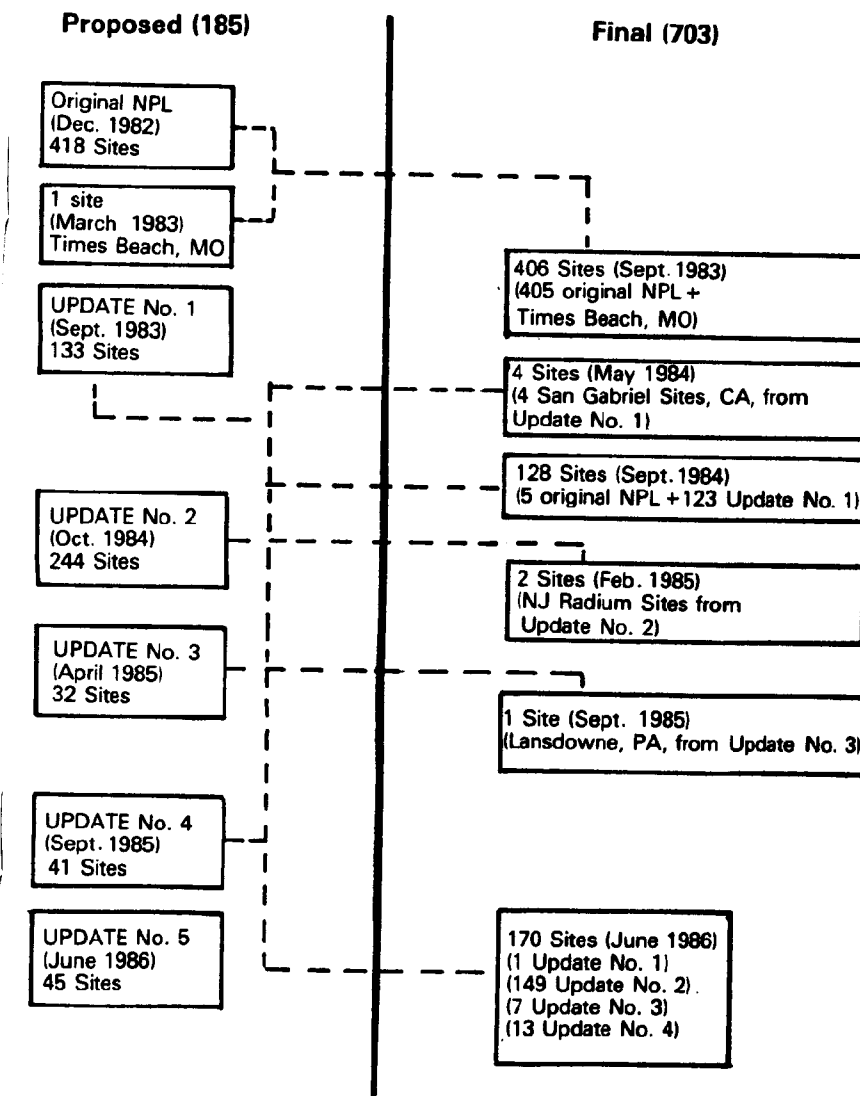

EPA published the first official NPL of 406 hazardous waste sites on September 8, 1983. It was the result of EPA's consideration of comments received during the 60-day public comment period on the 419 sites proposed in December 1982 and March 1983. (Earlier, before formal rulemaking, EPA had announced two preliminary lists.)

EPA must update the NPL at least annually. Since September 1983, EPA has proposed five updates to the NPL, added 305 sites to the final NPL, and deleted 8 sites. As of June 1986, 703 sites qualified for the NPL. Another 185 sites were in the proposed category, for a total of 888 sites. These totals result from the following EPA actions (all except the first two published in the *Federal Register*):

Date	Number of sites
October 23, 1981	115("Interim Priorities List")
July 23, 1982	45("Expanded Eligibility List")
December 30, 1982 (V.47, No. 251, 58476)	418(proposal of first NPL, including 153 of 160 sites announced previously)
March 4, 1983 (V.48, No. 44, 9311)	1(proposal of Times Beach, Missouri)
September 8, 1983 (V.48, No. 175, 40658)	406(promulgation of first NPL; 7 sites remain proposed)
September 8, 1983 (V.48, No. 175, 40674)	133(proposal of Update #1)

Date	Number of sites
May 8, 1984 (V.49, No. 90, 19480)	4(promulgation of 4 San Gabriel Valley Sites in California, part of Update #1)
September 21, 1984 (V.49, No. 185, 37070)	128 (promulgation of 123 Update #1 sites and 5 from original proposal; 4 sites remain proposed)
October 15, 1984 (V.49, No. 200, 40320)	244 (proposal of Update #2)
February 14, 1985 (V.50, No. 31, 6320)	2(promulgation of Glen Ridge and Montclair/West Orange Radium Sites in New Jersey, part of Update #2)
April 10, 1985 (V.50, No.69, 14115)	32, including 6 Federal facilities (proposal of Update #3)
September 16, 1985 (V.50, No.179, 37630)	1(promulgation of Lansdowne Radiation Site in Pennsylvania, part of Update #3)
September 18, 1985 (V.50, No.181, 37950)	41, including 3 Federal facilities (proposal of Update #4)
December 31, 1985 (V.50, No. 251, 53448)	8 (planned deletions)
March 7, 1986 (V.51, No. 45, 7935)	8 (deletions)
June 10, 1986 (V.51, No. 111, 21054)	170 (promulgation of sites from Updates #1-4; 185 sites remain proposed)
June 10, 1986 (V.51, No. 111, 21099)	45 (proposal of Update #5)
June 10, 1986 (V.51, No. 111, 21109)	proposed rule; reopening of comment period

Development of NPL

NPL Eligibility Policies

Sites are placed on the NPL primarily on the basis of their scores on the Hazard Ranking System (HRS), a numerically based system designed to evaluate the relative risks posed by a site to human health and the environment. An HRS score of 28.50 was selected as the cutoff point for the first proposed NPL to identify at least 400 sites, the minimum specified by CERCLA.

CERCLA also allows States or Territories to designate a top-priority site. Top-priority sites must be listed in the first 100 (Groups 1 and 2), regardless of score.

On February 12, 1985, EPA proposed amending the NCP to provide an additional criterion for listing. On September 16, 1985 (50 FR 37624), the amendment was adopted. Under section 300.66(b)(4), a site can now be included on the NPL if it meets these three requirements:

- The Agency for Toxic Substances and Disease Registry (ATSDR) of the U.S. Department of Health and Human Services has issued a health advisory that recommends removing people from the site.
- EPA determines that the site poses a significant threat to public health.
- EPA anticipates that it will be more cost-effective to use its remedial authority than to use its removal authority to respond to the site.

CERCLA restricts EPA's authority to respond to certain sites by expressly excluding some substances from the definition of "release." In addition, as a matter of policy, EPA may choose not to use CERCLA because other authorities can be used to clean up these releases. Where such authorities exist and the Federal government can undertake or enforce cleanup under an established program, using the NPL to determine the priority or need for response under CERCLA may not be appropriate. However, if EPA later determines that sites not listed as a matter of policy are not being properly responded to, it may consider placing them on the NPL.

CERCLA section 111(e)(3) prohibits use of the Trust Fund for remedial actions at Federally owned facilities, and, until November 1985, section 300.66 (e)(2) of the National Contingency Plan (NCP), the Federal regulation by which CERCLA is implemented, prohibited including Federal facilities on the NPL.

On February 12, 1985, EPA proposed amendments to the NCP, including one to delete section 300.66(e)(2). On November 20, 1985, EPA adopted the NCP amendments (FR 50 47912). With section 300.66(e)(2) deleted, Federal sites now can be included on the NPL.

Until the amendments were adopted, EPA continued to score Federal facilities and identify those that would meet

RCRA-Related Sites

the criteria for listing. EPA named six such facilities in the preamble to the *Federal Register* notice proposing Update #3 and three in the Update #4 preamble. EPA solicited comments on the nine sites and stated that it could place them on the NPL without soliciting further comments if the amendments were adopted. Earlier, EPA had proposed 36 Federal facilities in Update #2.

In establishing the first NPL in September 1983, EPA adopted a policy for placing sites related to the Resource Conservation and Recovery Act (RCRA) on the NPL. The policy stated that sites where RCRA provided no comprehensive authorities for correcting the contamination problems would be eligible for the NPL.

In November 1984, the Hazardous and Solid Waste Amendments were enacted, expanding EPA's authority to require corrective measures under RCRA. As a result of this broadened RCRA authority, EPA is revising its policy for placing RCRA-related sites on the NPL, and in June 1986, announced major components of a final RCRA policy.

As part of the policy, EPA will continue to consider eligible for the NPL those RCRA facilities to which RCRA Subtitle C corrective action authorities do not apply. In addition, certain sites subject to Subtitle C corrective action requirements are eligible for listing on the NPL if:

- The facilities are owned by persons who are bankrupt.
- The facilities have lost RCRA Interim Status and there are additional indications that the owner or operator will be unwilling to undertake corrective action.
- Based on a case-by-case analysis, EPA has determined that the facilities' owners or operators appear unwilling to undertake corrective action.

In June 1986, EPA requested public comment on a proposal to add specificity to the third component. EPA will consider supplementing the final RCRA listing policy if comments or experience with the new policy demonstrate that additional categories of RCRA-related sites should be placed on the NPL to ensure appropriate and expeditious remedial action.

I
es

NPL Update #2, proposed on October 15, 1984 (49FR 40320), consisted of 244 sites. California led with 41 sites. The following two sites in New Jersey were added to the NPL on February 14, 1985, in a separate rulemaking because serious problems existed that required EPA to take immediate remedial action:

- Glen Ridge Radium Site
- Montclair/West Orange Radium Site

Of the 242 remaining sites in proposed Update #2:

- Pratt & Whitney Aircraft in West Palm Beach, Florida, was repropoed for the NPL on September 18, 1985, as part of Update #4

On June 10, 1986, EPA took these actions on the 241 sites remaining in proposed Update #2:

- 149 were added to the NPL
- 86 continued to be proposed
- 6 were removed from further consideration because their final HRS scores fell below the cutoff point of 28.50

EPA received 607 comments on proposed Update #2, of which 543 pertained to 126 sites (including 36 Federal facilities). The remaining comments involved sites that were not proposed, or generic or technical issues that did not pertain to specific sites. In all, EPA reviewed over 12,000 pages of comments on proposed Update #2, the most it has ever received on an NPL rulemaking.

Of the 81 sites still under consideration in June 1986, 36 are Federal facilities and remain proposed because EPA is still reviewing public comments.

Proposed Update #2 contains 35 RCRA-related sites. Of the 35, 30 remained in proposed status in June 1986 because EPA needs more time to evaluate their RCRA status. The 30 sites are:

- Motorola, Inc. (52nd Street Plant), Phoenix, Arizona
- Applied Materials, Santa Clara, California
- Fairchild Camera & Instrument Corp. (Mountain View Plant), Mountain View, California
- Fairchild Camera & Instrument Corp. (South San Jose Plant), South San Jose, California
- FMC Corp. (Fresno Plant), Fresno, California
- Hewlett-Packard, Palo Alto, California
- IBM Corp. (San Jose Plant), San Jose, California
- Lorentz Barrel & Drum, San Jose, California

- Marley Cooling Tower Co., Stockton, California
- Monolithic Memories, Inc., Sunnyvale, California
- National Semiconductor Corp., Santa Clara, California
- Rhone-Poulenc, Inc./Zoecon Corp., East Palo Alto, California
- Signetics, Inc., Sunnyvale, California
- Southern Pacific Transportation Co., Roseville, California
- Teledyne Semiconductor, Mountain View, California
- Van Waters & Rogers, Inc., San Jose, California
- City Industries, Inc., Orlando, Florida
- Sheffield (U.S. Ecology, Inc.), Sheffield, Illinois
- Chemplex Co., Clinton/Camanche, Iowa
- U.S. Nameplate Co., Mount Vernon, Iowa
- National Industrial Environmental Services, Furley, Kansas
- E.I. du Pont de Nemours & Co., Inc. (Montague Plant), Montague, Michigan
- Lacks Industries, Inc., Grand Rapids, Michigan
- Findett Corp., St. Charles, Missouri
- Burlington Northern Railroad (Somers Tie-Treating Plant), Somers, Montana
- Lindsay Manufacturing Co., Lindsay, Nebraska
- General Electric Co. (Coshocton Plant), Coshocton, Ohio
- Culpeper Wood Preservers, Inc., Culpeper, Virginia
- IBM Corp. (Manassas Plant Spill), Manassas, Virginia
- Mobay Chemical Corp. (New Martinsville Plant), New Martinsville, West Virginia

EPA added the following two RCRA-related sites to the NPL because the potentially responsible party declined to initiate work and CERCLA-funded activities are underway:

- Operating Industries, Inc., Landfill, Monterey Park, California
- L.A. Clarke & Son, Spotsylvania County, Virginia

EPA has determined that the owners or operators of 3 of the 35 RCRA-related sites are bankrupt and believes that they are financially unable to take appropriate remedial action. Thus, EPA placed the following three sites on the NPL:

es
maining in
posed
atus

- Thermo-Chem, Inc., Muskegon, Michigan
- Whitmoyer Laboratories, Jackson Township, Pennsylvania
- American Creosote Works, Inc. (Jackson Plant), Jackson, Tennessee

EPA is continuing to evaluate the six pesticide-contaminated sites in Hawaii in the context of an overall policy for sites where contamination appears to result entirely from the application of pesticides registered under the Federal Insecticide, Fungicide, and Rodenticide Act. Hence, these six sites remained in proposed status in June 1986:

- Kunia Wells I
- Kunia Wells II
- Mililani Wells
- Waiawa Shaft
- Waipahu Wells
- Waipio Heights Wells II

Two mining-related sites remained in proposed status in June 1986 while EPA determines their eligibility for funds from the Abandoned Mine Land Reclamation Program of the Surface Mining Control and Reclamation Act. The two sites are:

- Olson/Neihart Reservoir, Wasatch County, Utah
- Sharon Steel Corp. (Midvale Tailings), Midvale, Utah

An additional 12 sites in Update #2 remained in proposed status in June 1986 while EPA continues to evaluate the public comments received. The sites are listed in the *Federal Register* notice of June 10, 1986.

Proposed Sites Removed From Consideration

Six proposed sites were no longer being considered for listing in June 1986 because of changes in HRS scores. As a result of EPA's review of comments and other information, 23 proposed HRS scores changed, but in only these sites did the changes lower the scores to below 28.50:

- Precision Monolithic, Inc., Santa Clara, California
- Davidson Lumber Co., South Miami, Florida
- Lenawee Disposal Service, Inc., Landfill, Adrian, Michigan
- Jame Fine Chemical, Bound Brook, New Jersey
- Mayflower Mountain Tailings Ponds, Wasatch, Utah
- Quendall Terminal, Renton, Washington

NPL Update #1, proposed on September 8, 1983 (48 FR 40674), consisted of 133 sites. On May 8, 1984 (FR 49 19480), 4 of the 133 sites were added to the NPL. On September 21, 1984 (49 FR 37070), 123 were added, 2 were removed from consideration, and 4 remained proposed.

EPA had continued the proposal of two of the four sites in September 1984 because of an administrative error during the 60-day comment period. After providing an additional comment period, EPA placed this site on the NPL in June 1986:

- Sand Springs Petrochemical Complex, Sand Springs, Oklahoma

The second of the two sites is RCRA-related. It remains in proposed status because EPA needs more time to evaluate its RCRA status. The site is:

- Olin Corp. (Areas 1, 2, 4), Augusta, Georgia

EPA continued the proposal of one site in September 1984 because it did not meet the existing criteria specified in the NCP for placing a site on the NPL. Section 300.66 (b)(4) of the NCP adds a new criterion involving issuance of a health-advisory by ATSDR. EPA is evaluating the site in light of the new criterion and so in June 1986 again deferred final rulemaking on:

- Quail Run Mobile Manor, Gray Summit, Missouri

A fourth Update #1 site remained in proposed status in September 1984 because EPA needed time to resolve technical issues relating to the site's HRS score. After further analysis, EPA has determined that the HRS score is below 28.50 and, therefore, removed this site from consideration in June 1986:

- Pig Road, New Waverly, Texas

Update #3 (Proposed April 1985)

NPL Update #3, proposed on April 10, 1985 (50 FR 14115), consisted of 32 sites, including 6 Federal facilities. Of the States and Territories, 18 were represented in proposed Update #3. Pennsylvania led with six sites.

Of the 32 sites, one, the Lansdowne Radiation Site in Lansdowne, Pennsylvania, was proposed on the basis of the amendment proposed in February 1985, to section 300.66(b) of the NCP. ATSDR issued a health advisory on March 5, 1985, as that section requires, stating that exposure levels in the Lansdowne residence were in excess of those considered safe for human habitation. The normal 60-day comment period following the proposal was shortened to 30 days to allow earlier action on the Lansdowne Radiation Site. EPA placed the site on the NPL on September 16, 1985 (50 FR 37630).

On June 10, 1986, EPA added to the NPL seven sites from proposed Update #3 on which no comments were received during the public comment period. The seven are:

- H. Brown Co., Inc., Grand Rapids, Michigan
- Valley Park TCE, Valley Park, Missouri
- Tibbetts Road, Barrington, New Hampshire
- Monitor Devices, Inc./Intercircuits, Inc., Wall Township, New Jersey
- Davis (GSR) Landfill, Glocester, Rhode Island
- Texarkana Wood Preserving Co., Texarkana, Texas
- Wausau Ground Water Contamination, Wausau, Wisconsin

After the NCP amendment on listing Federal facilities was proposed, EPA did not place on the NPL Federal facilities it had already proposed, nor did it formally propose additional Federal facilities. However, EPA continued to score Federal facilities. For proposed Update #3, EPA determined that six would meet the criteria for listing. EPA solicited comments on the scoring of these sites and reserved the right to place them on the NPL without soliciting further comments if it decided to list Federal facilities in the future. The six were identified in the preamble to the *Federal Register* notice proposing Update #3 to the NPL. With the prohibition against listing Federal sites removed, these six sites can now be counted in the proposed category:

- Moffett Naval Air Station, Sunnyvale, California
- Joliet Army Ammunition Plant (Load-Assembly-Packing Area), Joliet, Illinois

- Aberdeen Proving Ground (Edgewood Area), Edgewood, Maryland
- Aberdeen Proving Ground (Michaelsville Landfill), Aberdeen, Maryland
- Tinker Air Force Base (Soldier Creek Area/Building 3001), Oklahoma City, Oklahoma
- Letterkenny Army Depot (Property-Disposal-Office Area), Franklin County, Pennsylvania

Update #4 (Proposed September 1985)

NPL Update #4, proposed on September 18, 1985 (50 FR 37950), consisted of 41 sites, including 3 Federal facilities. Of the States and Territories, 18 were represented on proposed Update #4. Iowa and Pennsylvania led with five sites each.

On June 10 1986, EPA added to the NPL 13 sites from proposed Update #4 on which no comments were received. The 13 are:

- Interstate Lead Co. (ILCO), Leeds, Alabama (identified as RCRA-related, but the owner is bankrupt and financially unable to take appropriate remedial action)
- Halby Chemical Co., New Castle, Delaware
- Yellow Water Road Dump, Baldwin, Florida
- Columbus Old Municipal Landfill #1, Columbus, Indiana
- Tri-State Plating, Columbus, Indiana
- Lawrence Todtz Farm, Camanche, Iowa
- Midwest Manufacturing/North Farm, Kellogg, Iowa
- East Bethel Demolition Landfill, East Bethel Township, Minnesota
- Freeway Sanitary Landfill, Burnsville, Minnesota
- Waite Park Wells, Waite Park, Minnesota
- Croydon TCE, Croydon, Pennsylvania
- Lemberger Landfill, Inc., Whitelaw, Wisconsin (originally proposed as Lemberger Fly Ash Landfill)
- Sheboygan Harbor and River, Sheboygan, Wisconsin

As it did in Update #3, EPA named in the preamble to the *Federal Register* notice those Federal facilities that would meet the criteria for proposal. Thus, these three sites can now be counted in the proposed category:

- Naval Air Engineering Center (NAEC), Lakehurst, New Jersey
- Naval Air Station, Whidbey Island (Ault Field), Whidbey Island, Washington
- Naval Air Station, Whidbey Island (Seaplane Base), Whidbey Island, Washington

The Pratt & Whitney Aircraft/United Technologies Corp. Site in West Palm Beach, Florida, was proposed in October 1984, as part of Update #2. In response to comments on the proposal, EPA revised the site's HRS score. Consequently, EPA repropoed the site in Update #4 and solicited comments on the revised score.

Update #5 (Proposed June 1986)

NPL Update #5, proposed on June 10, 1986 (51 FR 21099), consisted of 45 sites, including 2 Federal facilities. Of the States and Territories, 23 were represented. Pennsylvania led with seven sites, followed by New York with six. This proposal brought to 185 the number of sites proposed for the NPL. Adding the 703 sites on the final NPL brought the total to 888.

Butler Mine Tunnel

The Butler Mine Tunnel, situated in a populated area in Pittston, Pennsylvania, is included in proposed Update #5. The tunnel was designed to drain acid mine waste into the Susquehanna River. The tunnel is honeycombed with boreholes and shafts. In addition to mine drainage, hazardous wastes were disposed illegally in the tunnel.

In July 1979, EPA initiated an emergency response action at the site because oily material was being released from the tunnel into the river. On October 23, 1981, EPA announced the Interim Priorities List, including the Butler Mine Tunnel Site. In February 1982, the State of Pennsylvania indicated that no further response actions were warranted based on monitoring of existing conditions. Butler Mine Tunnel was not included on the first NPL proposed in December 1982 because EPA had determined that all appropriate Fund-financed cleanup had been completed. Therefore, the Butler Mine Tunnel satisfied the criteria necessary at that time for deletion from the NPL.

Following heavy rains associated with Hurricane Gloria, oily material was observed discharging from the Butler Mine Tunnel outfall into the Susquehanna River in September 1985. EPA again took emergency action. However, remedial action may be needed in the future to provide a long-term resolution of problems at the Butler Mine Tunnel. Therefore, the site was included in proposed Update #5 to provide EPA the additional capabilities available under CERCLA's remedial action authorities.

Deletion of Sites

EPA may delete a proposed or final NPL site from the NPL if it determines that no further response is required to protect public health or the environment. A recent amendment to the NCP (50 FR 47912, November 20, 1985) establishes criteria for deleting sites under section 300.66(c)(7). A site may be deleted where no further response is appropriate if EPA determines that one of the following criteria has been met:

- EPA, in consultation with the State, has determined that responsible or other parties have implemented all appropriate response action required.
- EPA, in consultation with the State, has determined that all appropriate Fund-financed response under CERCLA has been implemented, and that no further response by responsible parties is appropriate.
- Based on a remedial investigation, EPA, in consultation with the State, has determined that the release poses no significant threat to public health or the environment, and, therefore, remedial measures are not appropriate.

Under the NCP amendments adopted in November 1985, sites that have been deleted remain eligible for further Fund-financed remedial actions if warranted by future conditions.

On December 31, 1985 (50 FR 53448), EPA provided a notice of intent to delete eight sites from the NPL and solicited comments on the notice. On March 7, 1986 (51 FR 7935), EPA announced that the following sites have been deleted:

- Taputimu Farm, Island of Tutuila, American Samoa
- PCB Warehouse, Saipan, Commonwealth of the Northern Mariana Islands
- Morris Arsenic Dump, Morris, Minnesota
- Friedman Property (once listed as Upper Freehold Site), Upper Freehold Township, New Jersey
- PCB Spills, 243 Miles of Roads, North Carolina
- Enterprise Avenue, Philadelphia, Pennsylvania
- Lehigh Electric & Engineering Co., Old Forge Borough, Pennsylvania
- PCB Wastes, Trust Territory of the Pacific Islands

Graphics, Lists, and Data Summaries

A total of 888 sites appear on the State map, 703 final NPL sites and 185 sites that are still in proposed status. After a period of public comment and revisions, the proposed sites that continue to meet the listing criteria will be merged into the final NPL.

Seven States or Territories — Alaska, American Samoa, Commonwealth of the Northern Mariana Islands, the District of Columbia, Nevada, Trust Territory of the Pacific Islands, and the Virgin Islands — have no final or proposed sites. When final and proposed sites are combined, New Jersey has the largest number with 97, followed by Michigan (66), and New York and Pennsylvania (65 each). Of the 10 EPA Regions, Region 5 (Illinois, Indiana, Michigan, Minnesota, Ohio, and Wisconsin) leads with 217 sites.

A wide range of activities are involved in the operations at the 888 sites on or proposed for the NPL. Landfilling was the major type of activity, taking place at about 42 percent of all sites. Other major activities were surface impoundments (27 percent) and drums (27 percent).

Most of the sites have problems involving contaminated ground water. At 74 percent, hazardous materials (primarily heavy metals and organic solvents) were detected in ground water. About 44 percent of the sites had problems with surface water, and 15 percent with air.

Types of Activities and Contamination Problems at Sites

NPL (by Rank)

Of the States and Territories, eight have no sites on the new final NPL: Alaska, American Samoa, Commonwealth of the Northern Mariana Islands, the District of Columbia, Hawaii, Nevada, Trust Territory of the Pacific Islands, and the Virgin Islands. New Jersey has the largest number of sites (91), followed by New York (57), Michigan (56), and Pennsylvania (48).

Each entry on the new final NPL contains the name of the site, the State and city or county in which it is located, and the corresponding EPA Region. (In some cases, the names have had to be shortened for space reasons. Complete site names are given in the list starting on page 50.)

The entries are arranged according to their scores on the HRS. HRS scores are designed to take into account a standard set of factors related to risks from potential or actual migration of substances through ground water, surface water, and air. Listing by rank serves both as an information and management tool, allowing EPA and the States to decide which sites warrant detailed investigation to determine what, if any, response is needed.

The 703 sites on the NPL are in 15 groups, 50 to a group (except for the last group of 3). The range within most of the groups is 1 to 4 points. EPA considers sites within a group to represent approximately the same potential threat to public health, welfare, or the environment. For convenience, the sites are numbered.

Of the States and Territories, 36 have designated a top-priority site. Four of these sites were deleted from the NPL on March 7, 1986. Of the 32 remaining top-priority sites, 9 are included in the first 100 on the basis of their scores. The remaining 23 have scores that would not place them in the top 100. They are included at the bottom of the second group of 50. Of the 23, 6 have scores below 28.50. The site placed on the NPL on the basis of section 300.66(b)(4), which includes issuance of a health-advisory by ATSDR, has a score below 28.50 and appears at the bottom of the list in Group 15.

Each entry is also accompanied by one or more notations referencing activities underway at the site at the time the list was prepared (June 1986). Five categories are used to designate the type of response underway. One or more categories may apply to each site. The five are:

- V** The Voluntary or Negotiated Response category includes sites where private parties have started or completed response actions pursuant to settlement agreements or consent decrees to which EPA or the State is a party.
- R** The Federal and/or State Response category includes sites at which EPA or State agencies have started or completed response actions.
- F** The Federal Enforcement category includes sites where the United States has filed a civil complaint (including cost recovery actions) or issued an administrative order. It also includes sites at which a Federal court has mandated some form of response action following a judicial proceeding.
- S** The State Enforcement category includes sites where a State has filed a civil complaint or issued an administrative order. It also includes sites at which a State court has mandated some form of response action following a judicial proceeding.
- D** Category To Be Determined includes all sites not listed in any other category. A wide range of activities may be in progress at sites in this category. EPA or a State may be evaluating the type of response action to undertake, or an enforcement case may be under consideration. Responsible parties may be undertaking cleanup actions that are not covered by a consent decree or an administrative order.

The status of Fund-financed field activities underway or completed, as well as the status where responsible parties are conducting cleanup activities under a consent decree, court order, or an administrative order, is indicated with one of three codes. Planning or engineering studies do not receive a cleanup status code.

Many sites are cleaned up in stages or "operable units" — that is, a discrete action taken as part of the entire site cleanup that significantly decreases or eliminates contamination, threat of contamination, or pathway of exposure. One or more operable units may be necessary before EPA will consider the cleanup of a hazardous waste site completed. A simple action such as constructing a fence is not considered an operable unit for coding purposes.

Three cleanup status codes are used. (Only one code can be used at a site because the codes are mutually exclusive). The three codes are:

- I** Implementation activities are underway for one or more operable units. Field work is in progress at the site, but no operable units are completed.
- O** Implementation activities are completed for one or more (but not all) operable units. Some field work has been completed, but additional work is necessary.
- C** Implementation activities are completed for all operable units. All actions agreed upon for remedial action at the site have been completed, and work has started to monitor the effectiveness of the cleanup. Further site activities could occur if EPA considers them necessary.

Proposed Sites

The list of the 185 sites from Updates #1-5 that remain in proposed status is arranged by State (two-letter abbreviations), with the 47 Federal sites in a separate section. Of the States and Territories, 18 have no sites in either section: Alaska, American Samoa, Commonwealth of the Northern Mariana Islands, the District of Columbia, Guam, Idaho, Massachusetts, Mississippi, Nevada, New Mexico, North Dakota, Puerto Rico, Rhode Island, South Dakota, Trust Territory of the Pacific Islands, Vermont, the Virgin Islands, and Wyoming. The State with the most sites is California with 27. Other States with a large number of proposed sites are Pennsylvania (17) and Illinois (11).

Each entry contains the name of the site and the State and city or county in which it is located. Essentially the same response categories are assigned for Federal sites as for non-Federal sites. A Federal agency response is

The 703 sites on the NPL are in 15 groups, 50 to a group (except for the last group of 3). The range within most of the groups is 1 to 4 points. EPA considers sites within a group to represent approximately the same potential threat to public health, welfare, or the environment. For convenience, the sites are numbered.

Of the States and Territories, 36 have designated a top-priority site. Four of these sites were deleted from the NPL on March 7, 1986. Of the 32 remaining top-priority sites, 9 are included in the first 100 on the basis of their scores. The remaining 23 have scores that would not place them in the top 100. They are included at the bottom of the second group of 50. Of the 23, 6 have scores below 28.50. The site placed on the NPL on the basis of section 300.66(b)(4), which includes issuance of a health-advisory by ATSDR, has a score below 28.50 and appears at the bottom of the list in Group 15.

Each entry is also accompanied by one or more notations referencing activities underway at the site at the time the list was prepared (June 1986). Five categories are used to designate the type of response underway. One or more categories may apply to each site. The five are:

V The Voluntary or Negotiated Response category includes sites where private parties have started or completed response actions pursuant to settlement agreements or consent decrees to which EPA or the State is a party.

R The Federal and/or State Response category includes sites at which EPA or State agencies have started or completed response actions.

F The Federal Enforcement category includes sites where the United States has filed a civil complaint (including cost recovery actions) or issued an administrative order. It also includes sites at which a Federal court has mandated some form of response action following a judicial proceeding.

S The State Enforcement category includes sites where a State has filed a civil complaint or issued an administrative order. It also includes sites at which a State court has mandated some form of response action following a judicial proceeding.

D Category To Be Determined includes all sites not listed in any other category. A wide range of activities may be in progress at sites in this category. EPA or a State may be evaluating the type of response action to undertake, or an enforcement case may be under consideration. Responsible parties may be undertaking cleanup actions that are not covered by a consent decree or an administrative order.

The status of Fund-financed field activities underway or completed, as well as the status where responsible parties are conducting cleanup activities under a consent decree, court order, or an administrative order, is indicated with one of three codes. Planning or engineering studies do not receive a cleanup status code.

Many sites are cleaned up in stages or "operable units" — that is, a discrete action taken as part of the entire site cleanup that significantly decreases or eliminates contamination, threat of contamination, or pathway of exposure. One or more operable units may be necessary before EPA will consider the cleanup of a hazardous waste site completed. A simple action such as constructing a fence is not considered an operable unit for coding purposes.

Three cleanup status codes are used. (Only one code can be used at a site because the codes are mutually exclusive). The three codes are:

I Implementation activities are underway for one or more operable units. Field work is in progress at the site, but no operable units are completed.

O Implementation activities are completed for one or more (but not all) operable units. Some field work has been completed, but additional work is necessary.

C Implementation activities are completed for all operable units. All actions agreed upon for remedial action at the site have been completed, and work has started to monitor the effectiveness of the cleanup. Further site activities could occur if EPA considers them necessary.

Proposed Sites

The list of the 185 sites from Updates #1-5 that remain in proposed status is arranged by State (two-letter abbreviations), with the 47 Federal sites in a separate section. Of the States and Territories, 18 have no sites in either section: Alaska, American Samoa, Commonwealth of the Northern Mariana Islands, the District of Columbia, Guam, Idaho, Massachusetts, Mississippi, Nevada, New Mexico, North Dakota, Puerto Rico, Rhode Island, South Dakota, Trust Territory of the Pacific Islands, Vermont, the Virgin Islands, and Wyoming. The State with the most sites is California with 27. Other States with a large number of proposed sites are Pennsylvania (17) and Illinois (11).

Each entry contains the name of the site and the State and city or county in which it is located. Essentially the same response categories are assigned for Federal sites as for non-Federal sites. A Federal agency response is

indicated by the (R) category. When the (R) category does not apply, other Federal agency activities at that site, such as evaluating the appropriate response to undertake, are indicated by the (D) category. Cleanup codes are assigned to Federal sites in the same manner as they are to non-Federal sites.

The 47 proposed Federal sites are also shown by group.

Sites Deleted Because No Further Response Needed

The 13 sites where EPA has determined no further response is needed at this time are shown by State in the list of "Sites Deleted Because No Further Response Needed." Eight of the sites were deleted from the NPL in March 1986 under section 300.66(c)(7) of the NCP. The remaining five were considered for the NPL, but EPA determined before promulgation of the first NPL in September 1983 that no further response was needed.

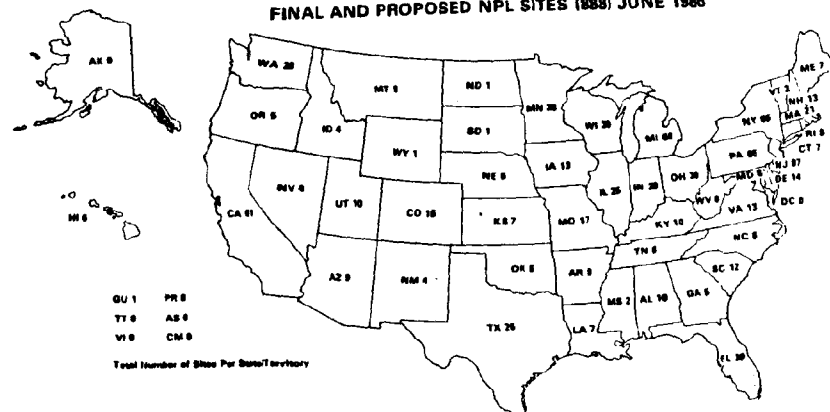

Proposed Sites Removed From Consideration for NPL

The 18 proposed sites considered for but never placed on the NPL are shown by State in the list of "Proposed Sites Removed From Consideration for NPL." EPA determined that the sites have HRS scores below the 28.50 cutoff.

Final and Proposed NPL Sites

In the list of final and proposed NPL sites by State, final sites are listed first, followed by proposed sites, both alphabetically. The "Date proposed or announced" heading provides a means of placing a site in a specific update; update numbers are given in the first section of this document. The "Rank/group" heading provides a means of identifying the response categories and status codes in earlier lists.

Observed Contamination at 888 Final and Proposed NPL Sites June 1986

Superfund Flowchart *

Developing the National Priorities List (NPL)

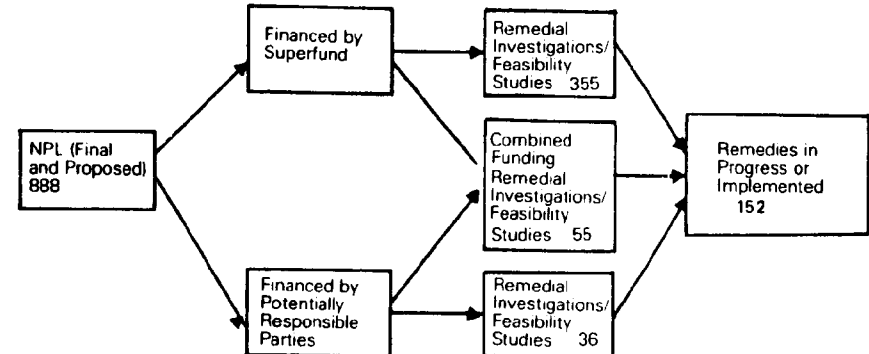

Several successive steps may be involved in placing a hazardous waste site on the NPL:

- Entry into CERCLIS—the computerized inventory of all potentially hazardous sites reported to EPA.
- “Preliminary Assessment”—collection and review of available information to determine if further action is needed.
- “Site Inspection”—on-site investigations needed to evaluate a site using the Hazard Ranking System and determine if further immediate or long-term action is needed.
- Proposal of site to be listed on the NPL.
- Public comment period.
- Listing on the NPL.

Superfund Flowchart (Cont'd)

Cleaning up NPL Sites

Cleanup of sites on the NPL can be financed by the CERCLA Trust Fund, by those potentially responsible for contamination at the site, or by a combination of the two. Response actions can require several years to complete and involve a number of successive steps:

- Taking any measures needed to stabilize conditions, which might involve, for example, fencing the site or removing above-ground drums or bulk tanks. Such measures usually would be required in any event in the later phases of cleanup. Often, such actions are taken by EPA's emergency “removal” program.
- Carrying out a “Remedial Investigation” to determine the type and extent of contamination at the site.
- Conducting a “Feasibility Study” to develop and analyze various response alternatives. The Feasibility Study is often conducted with the Remedial Investigation as one project.
- Providing a public comment period on remedies proposed.
- Selecting the remedy that provides the most protection to human health and the environment on the basis of permanence, reliability, and cost.
- Implementing the remedy. Typical remedies involve ground-water cleanup and measures to control the source of contamination (containing or treating the wastes on the site and managing the residuals on or off the site).

* As of May/June 1986. Statistics are updated regularly.
