INTER-OFFICE CORRESPONDENCE

TO	Dr. R. A. Kehoe	ADDRESS	Cincinnati
FROM	E. O. Jones	ADDRESS	New York
SUBJECT	Vitol	DATE	November 30, 1948

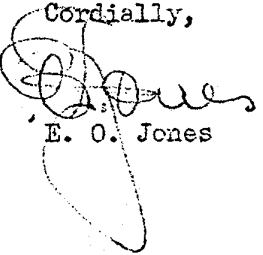

Dear Dr. Kehoe:

The following paragraph is quoted from Al Bingham's interview report of November 2nd covering conversations with the president and chief engineer of Canfield Oil Company, Cleveland:

"Mr. Hodous (chief engineer) called my attention to a report turned in by one of the company salesmen concerning the Thompson Vitameter. The salesman reported that one of his dealers had been solicited by a salesman offering to sell him a capsule containing a mixture of alcohol, water and lead. Mr. Hodous wanted to know if we were selling lead for this purpose. The idea of the capsule is to place the properties of the Thompson brand of antiknock fluid into the gas tank without the use of the expensive Thompson Vitameter."

This definitely looks like some sort of chicanery, and if widespread efforts are being made to sell such a capsule, we can no doubt obtain samples for analysis. My purpose in sending this to you is merely to keep you informed of such developments as take place.

Cordially,

E. O. Jones

EOJ/AL

Called to attention of Mr. Van Hatten.
