present knowledge, these organizations did not contribute or conduct studies regarding the health hazards of exposure to asbestos fibers.

They were asked whether Owens-Corning had a laboratory or other facility anywhere in the United States which it conducted or caused to be conducted any tests and/or studies of its products to measure the amount of asbestos dust generated by any use for which such product was designed; and they responded that to the best of their present information, they did not cause or cause to be conducted tests and/or studies of its Kaylo insulation products to measure the amount of asbestos dust generated by any use for which Kaylo was designed.

The next was whether they had undertaken or financed any tests or studies to determine what type of ventilator or ventilation system would eliminate or decrease the number of airborne asbestos fibers in confined spaces; and their response was to the best of their current knowledge, they have not undertaken or financed any tests or studies to determine what type
