Re: Your Code 0906
Your Letter November 20th

Gentlemen:

This is to advise that we have not changed the formulation or physical properties of J-M #60 Material.

Our letter of October 22nd did comment with regards to the military specification only to point out that the latest specification is -B. Our J-M #60 Material meets this revision in specification.

Very truly yours,

W. C. Campbell
Special Representative

Re: Our Specification Code 0906 and Your Letter of November 17, 1970

Dear Mr. Campbell,

We thank you for your letter. The subject De Laval Specification was approved by Navsec March 6, 1964. Since then we have had no trouble with the specification. Has any change taken place in the JM#60 that would require our review?

Thank you very much.

Yours very truly,

H. L. Hutson
Metallurgist

Re: Your Specification 0906
J-M Specification #60

Gentlemen:

We understand that our letter of October 22nd with regards to this specification has been forwarded to you for review.

We wish to supplement the previous letter to state that our #60 material does meet your specification.

We would like to make a firm comment on the military specification and as soon as we receive your reply, we can complete the confirmation of #60 material for your specification 0906.

Very truly yours,

W. C. Campbell
Special Representative

Re: Your Specification 0906
J-M Specification 60

Gentlemen:

We have tentatively reviewed this specification and find that our 60 material will meet your specifications. However, there are several minor points we wish to have our Quality Control Department review and have forwarded your specification to them.

We note that you referred to a specification MIL-A-7021-A. We note that the most recent specification is MIL-A-7021-B Amendment I dated November 4, 1964. Should this be changed? We will then comment as to our ability to meet this portion of your specification.

Very truly yours,

W. C. Campbell
Special Representative
