New York, New York 10017

Dear Dr. Cole:

Thank you very much for your personal interest and prompt reply to my wife's phone call concerning literature and articles on lead release tests for ceramic glazes and other related materials.

The article on "Toxic Metals in Earthenware" and the booklet "Facts about Lead Glazes for Art Potters and Hobbyists" were most helpful in my own research in this area.

My original air-mail letter found it's way to Dr. Donald R. Lynam of the International Lead Zinc Research Organization, Inc. whose reply and enclosed literature arrived the same day as your letter and information. You have both been most helpful and the information you sent very valuable to me. I feel that your information, plus the tests run at the University here in the Chemistry Dept. on my glazes are now sufficient to bring the present issue to a close as far as I am concerned.

Again, many thanks for your prompt reply and help.

Sincerely yours,

Miron E. Webster
