

1 Do you remember what the samples were?

2 A Yes, sir. We averaged the six samples and
3 four of those six samples in the three tests that were
4 done, I think there were 18 samples done in that
5 sequence.

6 I think they ranged from .05 to, I think, .9
7 or almost one fiber per cubic centimeter for the test
8 sequence, the three test sequences that were done with
9 that.

10 Q I think you also indicated that in addition
11 for -- to measuring for asbestos fibers, you also
12 measured the total dust levels?

13 A Yes, sir.

14 Q Why did you do that?

15 A Well, the asbestos dust -- fibers are dust,
16 are part of the particulate load in the environment,
17 and we knew based on a lot of reading and a lot of
18 understanding of this issue that the asbestos was a
19 very, very small portion of the total dust that was
20 there.
