told you about it before?

A Not this specific one. Of course, there was a lot of commotion.

I remember when I came back from the West Cost there was a lot of commotion and should have been, because there was asbestos fiber floating around in the plant. And, see, we went busily about getting rid of it and finally did.

Q When you got back from the West Coast -- my question to you is, Mr. Thomas, aren't you just a little bit angry or annoyed you are finding out about these Kaylo studies for the first time in 1991 and that no one told you about this?

A No, I don't think so. I think this is a matter of a lot of things that were going on, and I didn't have any close contact with and no occasion to know about them.

BY MR. SMITH:

Q If you had been present in 1952 and/or received this report, this would have been a red flag to you, wouldn't it?
