Dr. L. B. Willett
Assoc. Professor, Dairy Science
Ohio Agricultural Research and
Development Center
Wooster, OH 44691

Dear Dr. Willett:

Monsanto Company is anxious for your proposed dairy cattle feeding study using rations dosed with polychlorinated biphenyls to go forward with expedience.

We recognize that the time required by both parties to complete the necessary paperwork may be several weeks. In order to expedite this study, we authorize you to proceed with the purchase of the livestock in order to move the animals and begin getting them acclimated to the test facilities.

This memorandum authorizes you to purchase the test animals and guarantees payment up to $12,000.00 for the purchase.

Hopefully, this expense can be incorporated into the total research project grant to facilitate payment.

If I can be of further assistance, please let me know. We look forward to receiving the completed protocol in the near future.

Sincerely,

John H. Craddock
Product and Environmental
Safety Director
