TO:

SUBJECT: X-RAY

3-9-88 CHEST (Lateral and both obliques): A density is superimposed over the body of T-11 which may be the density seen in the right retrocardiac area on the previous films five days ago. There is some loss of height of the 8th dorsal vertebra. Prominent pleural shadows are seen paralleling the left 4th and 5th ribs on the oblique view.

Conclusion: Small mass still suspected at the right lung base posteriorly - tomograms or a CT scan are suggested for further evaluation.
