SUBJECT INDUSTRIAL BIO-TEST
23-MONTH STATUS REPORT
CHRONIC VAPOR INHALATION STUDY--VCM

The attached report is our only copy. Please read and pass on. Nothing significantly new is reflected in the report.

Tables on Pages 8, 9, and 10 are of interest and show a significant earlier mortality in treated mice, some difference in rats, and little difference in hamsters at 50 ppm VCM treatment.

Tables on Pages 19 through 93 show an increase in gross tumors observed in the treated animals vs. the controls, with hamsters the least susceptible and mice the most susceptible.

Very truly yours,

H. L. Schmidt, Jr.
