

1 regulatory compliance with respect to asbestos?

2 A Not in a specific individual sense
3 because we had, there was OSHA regulations that
4 were federal, and there was OSHA compliance
5 states where the states were acting on behalf
6 of -- it gets more complicated -- on behalf of
7 OSHA.

8 And so usually the point person would
9 have been at the local facility if there was an
10 issue raised related to OSHA compliance, and
11 then, if necessary, it would go up through,
12 escalate through headquarters.

13 Q Okay. Could you give me an idea of
14 general structure when you first came to work
15 for Ford? Could you give me the idea of the
16 general structure of Ford's Occupational Safety
17 and Health Department or Group?

18 A There was the, the place was run by
19 the medical director, and under that they had
20 the Industrial Hygiene Department, the Safety
21 Department, certainly Medical Department and
22 then I came in as a toxicologist.

23 So it became Industrial Hygiene and
24 Toxicology Department, and then it went through
25 several name changes and organization changes.
