Dr. Richard Gaze  
The Cape Asbestos Company Limited  
114 & 116 Park Street  
London W.1., England

Dear Dick:

I have yours of the 14th of June giving Dr. Smither's address.

We have received a proposal from the Industrial Hygiene Foundation of America, Inc., located at the Mellon Institute in Pittsburgh, for a study of the specificity of asbestos bodies and the biologic effects of trace substances associated with chrysotile asbestos and covering the amosite and crocidolite forms of asbestos. This proposal is for a three or four year study and we are planning to join in the group who are backing it.

Our work on improving UNIRESTOS is proceeding at a rather measured pace. We feel that one of the basic problems is better fiberization of the raw material and are anxiously awaiting your studies on the relative merits of the Paulman Mill and the one which you mentioned to me last month in London. I believe it came from South Africa. I feel that based on your investigation we should order a unit as soon as possible. If you feel that it would be to our advantage to have someone take a look at the Mill first in England, we would send someone over. I believe that you are close enough to our problem so that we would learn very little more by seeing it in operation than hearing of its performance from you.

With every kind wish to you and Elizabeth from both of us.

Sincerely,

Russell Brittingham

Re: Kanawha County, In Re: Asbestos III  
Pittsburgh Corning Corporation

Dear Jackie:

As a result of requests for production and discussion of those requests in Court in Charleston, West Virginia, Pittsburgh Corning Corporation has caused a further review of documents which came from its files and which counsel for plaintiffs might argue relate to knowledge on the part of Pittsburgh Corning Corporation of health hazards caused by exposure to asbestos. The search was done for the entire period of time in which Pittsburgh Corning Corporation manufactured Unibestos and was geared to identify documents which may not have been previously produced to your firm or its affiliated counsel. It is our belief that in the discovery over the years that your firm or its affiliated counsel have seen virtually every document which came from Pittsburgh Corning Corporation's files and which would fall into the above description. Nonetheless, there are a few documents which have been produced previously but the circumstances as to the jurisdictions of those productions are unclear. Accordingly, in an abundance of caution and completeness, we have enclosed copies of those documents herewith.
