**Re: Declassification Activity - TSCA §8(e) Submission**  
**Originally Assigned 8EHQ Number: 8EHQ-06-16436 (letter dated 04.07.06)**  
**Originally Assigned Bar Code: 88060000208**  
**CAS number: 62037-80-3**  
**Supplemental Submission - Revised Public Copy of Submission**

Dear TSCA Declassification Coordinator:

This submission is made in connection with the EPA 2010 CBI Declassification Challenge initiative.

Please find enclosed a revised public copy of the above-identified submission. Any information still claimed as confidential business information (CBI) in the attached report has been redacted and replaced by brackets. The originally assigned 8EHQ number has been added by the submitter to the first page of the enclosed revised public copy of the submission.

Very truly yours,

Andrea V. Malinowski

Washington, D.C. 20460

Dear 8(e) Coordinator:

Tetrafluoro-2- (heptafluoropropoxy)-propionic acid, ammonium salt  
CAS # 62037-80-3  
Generic Name: Perfluorinated aliphatic carboxylic acid, ammonium salt

This letter is to inform you of the results of a pre-1977 (1963) acute oral toxicity study that we recently became aware of on the above-referenced R&D test substance.

The test substance was administered by gavage as an aqueous solution, in single doses to young adult male rats ranging from 1.5 to 17,000 mg/kg of body weight. The rats were observed for clinical signs and weighted during a 14-day observation period. At the end of the observation period, surviving rats were sacrificed, selected organs weighed and examined histologically.

Rats dosed at 7,500, 11,000, 12,963, and 17,000 mg/kg died within approximately 3 hour of dosing and exhibited discomfort, gasping and/or tonic convulsions prior to death. Rats dosed at 5,000, 3,400 and 2,250 mg/kg exhibited discomfort, increased water intake, inactivity and initial weight loss followed by normal weight gain. These rats had slightly enlarged livers (enlarged hepatocytes with pronounced cell membranes). In addition, slight to moderate degenerative changes in the pancreas were noted. No findings were noted in rats dosed below 2,250 mg/kg. The Approximate Lethal Dose (ALD) was 7,500 mg/kg.

Under these experimental conditions, the findings described above appear to be reportable, based upon the guidance given in the EPA TSCA Section 8(e) Reporting Guide (June 1991).

Substantiation of our confidentiality claim is enclosed

Sincerely,

A handwritten signature in black ink, appearing to read "A. Michael Kaplan", written over a horizontal line.
