

INDUSTRIAL CHEMICALS DIVISION

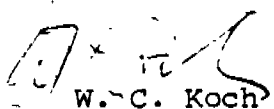

MEMORANDUM

June 29, 1976

Mr. W. S. Ferguson
C.O. Env. Svcs. - SOL 1

Subject: Personnel Monitoring
Vinyl Chloride - May 1976

Nine employees were monitored during the month of May and for the first time since September 1975, the action level of 0.5 PPM was exceeded and it was found that several leaks had developed in the processing area and were evidenced by the stationary monitoring equipment. Corrective action has been taken and rechecks later in the month indicated that the TWA's had decreased to well below the 0.5PPM level.
