DOCUMENT DESCRIPTION: Memo - Handwritten to Paul from Roger RE Employee Exposure to Tremolite Talc Dust

PLAINTIFF'S EXHIBIT
FD-1761

Paul –

Correspondence is attached concerning our studies of employe exposure to tremolite fibrous talc dust at Dearborn Glass Plant.

The plant has decided not to:

1. Notify overexposed employes.
2. Issue approved respirators.
3. Institute chest X-rays and clinical examinations.
4. Other OSHA requirements, etc., etc.

The proposed ventilation changes the plant engineering department has suggested are, in our opinion, worthless.

Roger

Pls return letters to master file when finished.
