MONSANTO CHEMICAL COMPANY MAY 5 1964

From St. Louis - General Offices cc: NEW YORK - G. R. Graham

DATE May 4, 1964

SUBJECT Mr. Thomas Weil
Box 2751

REFERENCE RAYTHEON COMPANY
Wayland, Massachusetts

TO E. P. WHEELER

I quote the following from a call report from G. R. Graham in New York:

"Would you please request that the Medical Department write directly to Thomas Weil, Box 2751, relative to the toxicity of Aroclor to the skin and breathing. This material would be handled mostly at room temperature and occasionally the equipment would be open at 160°F. However, the fluid would be allowed to cool before the technicians worked on the equipment. When dismantling the equipment, this would necessitate their exposing their hands to the Aroclor."

Could you please send some information to Mr. Weil relative to the toxicity of Aroclor under these conditions. Specifically, you might think in terms of Aroclor 1242 or Inerteen PPO.

Thank you very much.

G. R. BUCHANAN
