"MONASTRAL" BLUE B, BW-461-P

Jim Bastian, F and F, Marshall Lab, reports that they do not anticipate commercial use of this product the first quarter of 1965 pending storage stability test results. If acceptable storage stability is assured, they anticipate adoption in the second quarter. They confirm the strength advantage and slightly lesser brush sensitivity versus BW-431-P. Replacement of BW-431-P for exteriors will take longer since exposure tests must be made.
