ALBERT C. CLARK
VICE PRESIDENT
TECHNICAL DIRECTOR

December 12, 1973

To: THE DESIGNATED REPRESENTATIVES OF COMPANIES
SUPPORTING THE ACROOSTEOLYSIS PROJECT

Subject: Termination of the Acroosteolysis Registry
Project

Gentlemen:

The responses received to my letter of October 23 concerning the Acroosteolysis Registry Project at the University of Michigan have been universally in favor of Dr. Magnuson's proposal for termination. We are proceeding to notify the University of Michigan, requesting return of unexpended funds remaining in their custody, and to return to each sponsor its prorated share of such funds.

Dr. Magnuson has also suggested that the University retain the records now in their hands for a couple more years, on the possibility that they may prove of value to some near-future study; in the absence of any further demonstration of interest, they will then be destroyed. Thus, any final decision on the disposition of the records can be deferred for the present, but if you have any alternative suggestions, please let me have them without undue delay.

Sincerely,

AC Clark

This relates to a problem associated with VCM in the polymerization area where work men come in contact with VCM that have been absorbed in the resin when they clean out a reactor. Thought you might be interested in above, since we are out of the PVC business.
