

Air contaminants (continued)
combustible dusts, 151
fallout, 158
flammable gases and vapors, 150
limits, 156
industrial, 150
measurement, 149
pollen, 159
radioactive, 158
sizes, 149
threshold limit values, 152

Air-cooled condensers, 691

Air coolers, 593
evaporative, 593, 598
air washers, 593
equipment, 598
principles, 593
rotary unit, 599
slinger unit, 598
wetted-pad unit, 598

Air cooling, 593, 603
coils, 603

applications, 606
arrangement, 603, 606
construction, 603
control, 605
dehumidifying, 608, 611
direct-expansion, 604
dry, 608, 610
flow resistance, 609
heat transfer, 609
performance of dehumidifying coils, 611
performance of dry coils, 610
refrigeration load determination, 611
selection, 607
uses, 603
water, 604
evaporative, 593, 598
air washers, 593
equipment, 598
principles, 593
rotary unit, 599
slinger unit, 598
wetted-pad unit, 598

Air-cycle equipment, 671

control, 673
air flow, 674
compartiment air temperature, 673
turbine anti-ice, 674
water separator, 674
performance estimating, 675
design for other air flow capacity, 681
fixed size units, 675
test performance curves, 675
sources of high pressure air, 674
systems, 671
basic, 671
basic-evaporative, 671
bootstrap, 672
bootstrap-evaporative, 672
reduced ambient, 673
regenerative, 673

Air diffusing equipment, 553

ceiling diffusers, 556
accessory devices, 556
applications, 555
special features, 556
high velocity, 558
dual-duct terminal units, 559
high capacity dual-duct units, 559
pressure-reducing valves, 558
single-duct terminal units, 559
slot diffusers, 555
accessory devices, 556
applications, 555
special features, 556

Air-diffusing equipment (continued)

supply grilles, 554
accessory devices, 555
applications, 554
special features, 555

Air distribution, 537, 553

Air ducts, 561
circular equivalents, 565
construction, 576-580
rectangular high-pressure, 579
rectangular low-pressure, 576
rectangular medium-pressure, 578
round, 577
design, 561, 570
equal friction method, 571
high velocity, 575
procedure, 570
static regain method, 572
velocity, 570
velocity reduction method, 571
dynamic losses, 565
friction losses, 562-565
heat losses, 579
pressure changes, 561
pressure losses, 563
area changes, 569
divided-flow fittings, 568
elbows, 567
weights, 580

Air heating, 613

coils, 613
applications, 614
construction, 613
design, 613
flow arrangements, 614
heat transfer, 615
performance, 616
ratings, 615
selection, 615
steam, 613
water, 613

Air pollution, 151

Air requirements, 101
minimum for odor removal, 102

Air washers, 593

air cleaning, 597
cooling, 598
dehumidification, 596
humidification, 595
maintenance, 597
types, 593
cell-type, 595
high-velocity, 595
spray-type, 593

Ammonia-water systems, 14, 661, 665
chilled water temperature influence, 666
condenser water temperature influence, 666

equilibrium properties, 14
heat source temperature influence, 666
low temperature application, 666

Anemometers, 248

Animals, physiological considerations, 117

castle, 117
heat and moisture release, 118
growth rate, 118
production rate, 117
reproduction, 118
poultry, 121
heat and moisture release, 122
sheep, 119
growth rate, 119
heat production, 120

Animals, physiological considerations (continued)

production rate, 119
reproduction, 120
growth rate, 120
heat and moisture release, 121
Anodic polarization, 224
Apparatus dew point, 522

Atmosphere, U.S. Standard, 41

pressure at altitude, 41
temperature at altitude, 41
Attenuation, 192, 199, 206-211
ducts, 202
prefabricated units, 211
Axial-flow fans, 583, 589

B

Barometer, 246

Baseboard units, 557

applications, 561
heat emission, 557
non-standard conditions, 560
ratings, 560

Boilers, 819

cast-iron, 819
connections and fittings, 825
design considerations, 820
furnace design, 826
heat transfer rate, 820
heating surface, 820
efficiency, 823
erection, 826
maintenance, 826
boiler troubles, 826
care of idle boilers, 827
cleaning new boilers, 826
treatment of boiler water, 827
operation, 826
rating, 821-824
rating codes, 820
selection, 824
cast-iron, 824
gas-fired, 825
grate area basis, 825
heating surface basis, 825
steel, 824
space limitations, 825
steel, 819
testing codes, 820

Boiling, 59

burnout, 59
film, 59
forced convection, 59, 61
natural convection, 59
nucleate, 59

Bottled beverage coolers, 917

design considerations, 913
air circulation, 919
anticipated sales rate, 918
beverage freezing point, 919
bottle size and shape, 919
equipment evaluation, 920
temperatures, 918
refrigeration calculations, 920
types, 917
horizontal dry (cold wall), 917
horizontal forced-air, 917
vertical forced-air, 918
Boundary layer, 57, 71, 89

Brines, 371, 703

calcium chloride, 371
properties, 372, 373

Index to Technical Section

Brines (continued)

coolers, 703
design criteria, 705
heat transfer, 707
types, 703
corrosion, 375
ethylene glycol, 375
properties, 375
halocarbons, 379
propylene glycol, 375
sodium chloride, 372-374
properties, 372, 374

C

Calcium chloride brine, 371

properties, 372
specific gravity, 373
specific heat, 373
thermal conductivity, 373
viscosity, 373

Capillary tubes, 734, 904

capacity balance characteristic, 735
household refrigerators, 904
inspection, 736
optimum refrigerant charge, 736
optimum selection, 736
preliminary selection, 737
chart, 737
processing, 736
simplified calculation procedure, 737
basic rating curves, 738
critical correction factor, 740
critical pressure chart, 740
examples, 740
flow-factor chart, 739
performance chart, 741
pressure drop chart, 741
special applications, 736
system design factors, 734
theory, 734
Cathodic protection, 223, 240
Cavitation, 90

Centrifugal compressors, 647

control, 651
capacity, 651
safety, 652
multiple machine operation, 652
performance, 650
refrigerants, 647
selection, 652
system components, 649
condensers, 649
evaporators, 649
other, 649
hermetic, 649
open, 648

Centrifugal fans, 583

applications, 591
arrangements, 587
control, 587
installation, 590
laws, 584
location, 589
motors, 589
outlet velocity, 590
performance, 583, 585
system characteristics, 587
types, 583
Charcoal, activated, 161
capacity index, 164

Charging, 760

automatic, 760
manual, 760
special considerations, 761

Check valves, 731

Chillers, 911
water, 911
components, 913
construction standards, 912
design, 911
selection requirements, 911

Chimneys, 835

damage, 840
gas appliance venting, 838
brick and metal, 838
factory built, 838
type B, 838
general considerations, 836
industrial, 836
available draft, 840
NBFU recommendations, 845
performance, 840
residential, 837
short, 837
sizing, 843
boilers, 843
industrial, 843
residential, 843

Circular equivalents of rectangular ducts, 565, 567

Cleaners, air, 617
applications, 625
installation, 624
maintenance, 624
performance, 622
rating, 617
limitations of, 619
significance of, 619
test methods, 617
selection, 624
supply, 617-626
types, 620
dry, 621
electronic, 622
viscous impingement, 620

Coal, 269

analysis, 269
classification, 269
Coal-fired equipment, 805
Codes, 989

Coefficient of performance

absorption cycle, 12, 663
compression cycle, 4
thermoelectric couples, 24

Coils, 603, 613

cooling and dehumidifying, 603
applications, 606
arrangement, 603, 606
construction, 603
control, 605
dehumidifying, 608, 611
direct-expansion, 604
dry, 608, 610
flow resistance, 609
heat transfer, 609
performance of dehumidifying coils, 611
performance of dry coils, 610
refrigeration load determination, 611
selection, 607
simultaneous heat and mass transfer, 611
uses, 603
water, 604
heating, 613
applications, 614
construction, 613
design, 613
flow arrangements, 614

Coils (continued)
heat transfer, 615
performance, 616
ratings, 615
selection, 615
steam, 613
water, 613

Combustion, 269

air requirement, 276, 279
air supply, 279
complete, 273
condensation, 279
corrosion, 279
efficiency, 276
energy balance, 278
flue-gas losses, 274-279
fundamentals, 273
heat of, 274
soot, 279
Stoichiometric, 274

Comfort, 101, 537

air distribution, 537
chart, 110, 113
effective temperature index, 107
for persons at work, 108
man and thermal environment, 102
upper limits of heat, 106
scales, 103
Comfort chart, 110, 113

Component balancing (refrigeration), 71

effect of variables, 712
air flow, 712
dry coil operation, 713
heat transfer surface, 712
pressure drop, 712
refrigerant flow control device, 713
performance diagrams, 711
system performance, 713
example, 714
trouble diagnosis, 713

Compression refrigeration, 3

cycles, 3
actual basic, 7
coefficient of performance, 4
complex, 9
energy balance, 7, 9
equipment diagrams, 4, 9
ideal basic, 3
performance factors, 4
pressure-enthalpy diagram, 4
reversed Carnot, 4
temperature-entropy diagrams, 5-8, 10

Compressors, 633

centrifugal, 647
controls, 651
multiple machine operation, 652
performance, 650
refrigerants, 647
selection, 652
system components, 649
