H.A.VODDEN. LOUVAIN LA NEUVE.

I agree that it is worth while to emphasise the fact that practical experience of working in Aroclor plants has not given rise to any undue morbidity experience, when you communicate with the Ministry for Electrical Engineering Industries of the U.S.S.R.

I suggest that, along with your usual statement and toxicological data, you could add:-

"Our experience in manufacture and use of Aroclors has not given rise to any specific health problem beyond occasional incidence of acneiform dermatitis when working conditions have been particularly bad."

RPWK,

R.P.W.KUP

Hope you enjoyed your Chicago flight as much as I did!
