

INTERVIEW REPORT

COMPANY: Tidewater Assoc. Oil Co.

DATE: April 2, 1948

Chief Engineer

TITLE

New York N.Y.

LOCATION

Field Engineer

the above men in our office to discuss tank cleaning precautions and responsibilities. The need for this conference was made apparent at a recent tank cleaning job for Tidewater at South Portland, Maine. Jim Beckwith observed the job and Harry Isming was the Tidewater Engineer in charge. Details of the job are covered in Jim's tank cleaning report of March 16th to 19th, 1948 and letter of March 20th. Also see interview report, A.J. Baldwin, March 18th.

We feel that this meeting has cleared up any misunderstanding that may have been present and that we will have better cooperation in the future. Mr. Benner is thoroughly aware of the hazards and insists that our recommended precautions be followed by Tidewater's field men and that these men cooperate fully with the "Ethyl" observer on the job.
