tank clean for
aqua tank - dispo*

ETHYL CORPORATION
CHRYSLER BUILDING
NEW YORK 17, N.Y.

Circular Letter No. S-29-47

Subject: Cleaning of Underground
Aqua System Tanks

Safety Manual Section XII

TO ALL OPERATIONS MANAGERS

COPY FOR Dr. R. A. Telle

Gentlemen:

We are quoting below excerpts from a letter received from the Central Region concerning a method of cleaning the subject tanks which we are distributing for your information.

"For your information, Mr. H. A. Lappe, in a discussion with Mr. E. F. Winslow of the Strategic Air Command, learned that this agency had decided that aqua system tanks could be satisfactorily cleaned by flushing water through the aqua system without any entry being made into the tank. Mr. Lappe further advised that on a tank cleaned at Pueblo, Colorado, this procedure seemed to work fairly well and that the flushing was continued until the water came out clean.

"On this particular cleaning referred to above, the tanks are 6 feet underground and will be filled with sand due to the fact that they were buried under concrete."

Very truly yours,

E. O. Jones
