Date May 12, 1976

Subject Medical Examinations

The Corporate Safety Department has been advised that three employees at our Afton Plant have worked with an asbestos-containing material (Synthane Asbestos, Base Grade AA). It is an asbestos-backed laminated printed circuit board material* which they cut on an average of approximately three (3) minutes a day. A standard abrasive wheel with a local exhaust ending in a filter bag is used.

Would you please conduct the necessary medical examinations for these employees as per OSHA, Federal Register Section 1910.93 a (j):

[REDACTED] - Dept 4H, Employee No. 37362

[REDACTED] - Dept 5F, Employee No. 20247

[REDACTED] - Dept 5F, Employee No. 20490

Thank you for your cooperation.

* - Afton is looking for a non asbestos substitute material at this time.

** - No longer using this material due to change in job assignment.

5/13/76

Norb -

I awarded a copy of this memo to Dr. Berenson who should be able to initiate the necessary monitoring procedures.
