Special Instructions 0002

DMEH Industrial Hygiene Air Monitoring Method Index

Enclosed in this bulletin is an index of all the methods we have on file. Each method has been assigned a DMEH method number which will be used on the MEHI Industrial Hygiene data transmittal forms, #G2875. One index is arranged alphabetically and the other by DMEH method number. You will receive an update of new methods quarterly and a reprint of the full index yearly. This index and any methods received should be put into the blue DMEH AIR MONITORING METHODS MANUAL sent to you last year.

The index is described in the following example:

material		collection device		analytical tool
acetone	01001	charcoal	CS ₂	GC
	DMEH method number		desorbent or desorbant	NIOSH
				source of method

All NIOSH methods begin with either 00 or 01 and the last three numbers correspond to the NIOSH assigned number. (00 methods are the P & CAM series and 01 methods are the S series.) Those methods beginning with 02 are either Monsanto, literature, or other company methods.

You may request methods from this list by sending us the name of the material and the DMEH method number. If you are currently using or have used a method that does not have an assigned DMEH number, send us a copy and we will log it in the file, assign it a number, and print it in the next quarterly update. If an update of an old method is received, we will recall the old method and issue the new method with a new method number.

Due to the quantity of the methods on file, we are by no means recommending or endorsing any one method. Also we make no claims to the accuracy or reliability of the method if used in your plant. The plant validation is left to you if you use a method from this file.

The above information is based upon studies conducted for Monsanto Company. It is believed to be correct and it is supplied to others upon the condition that the persons receiving it shall make their own determination of its suitability for their purposes. No warranty is expressed or implied regarding the accuracy of this information or the results to be obtained from its use.

RSV 0005296

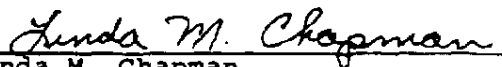

Our appreciation is extended to those plants and personnel that have contributed methods for this index.

Requests or new methods should be sent to:

Paul Jeannot
St. Louis Mail Zone Q3D

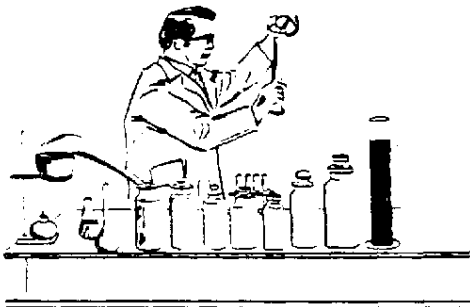

Brian G. Ward

Linda M. Chapman

Special Instructions 0002

Please take the time to complete and return the attached acknowledgment slip. This will ensure continued receipt of information assigned to your file. This is a part of our efforts to ensure continuing good sampling practices through careful documentation of methods, protocols and special bulletins.

Please detach and return to Paul M. Jeannot, DMEH, St. Louis - Q3D.

DMEH Industrial Hygiene Air Monitoring Method Index - Receipt Acknowledgment. Special Instructions 0002.
